Correspondence

To Editor of "The Delia Times"

DEAR MR. EDITOR.—As I am well aware of the interest you take in the weed question in the municipality as shown by your excellent editorials, and articles on this subject, I again ask for a little space in your paper, to discuss a weed, which, though not the one most frequently seen, is yet the greatest menace of all—I refer to the perennial sow thistle.

It is no news to Alberta farmers, that this weed has been responsible for driving many farmers off the land in Manitoba, and, that it is spreading with alarming rapidity through the other western provinces. As it has already made its appearance in this municipality it behoves the farmers to be on their guard, to be able to recognize it at its first appearance, and to know the best methods of eradication.

For the benefit of those not already acquainted with it, its appearance is as follows: Stems are from one to five feet high, hollow, and with few leaves, branching at the top, enabling a blister milky juice from both leaves and root. The leaves are pointed and deeply cut, clasping the stem with their heart-shaped base and edged with soft spines. The flowers are bright yellow, and about one and one half inches across, closing in strong sunlight. The root stocks extend along the ground about four inches below the surface and great numbers of new plants shoot up from these root stocks. Once one is acquainted with sow thistle it is easily recognized, as, in practically every case, where it is once established, the plant will grow a little taller than the surrounding crop, whether grain or grass.

As advertised elsewhere in this paper, a joint meeting will be held in Delia on Thursday, May 30th, 1929 by the Municipal District of Lambton and Mecheche for the purpose of discussing this menace and the best means of eradication of it, and other weeds which are giving trouble in this neighborhood.

We hope all who are interested will make it a point to be present, and be ready to discuss their particular problems with us.

The Municipal District of Lambton, has set aside a sum of money to be used for prizes for essays connected with weed control from children residing or attending school in this municipality. I have been surprised and pleased to see the keen interest the children take in the subject of weeds, and I think we should use our best endeavors to hand down to the coming generation clean farms, and the knowledge of how to keep them so.

Thanking you, Mr. Editor, for your courtesy.

I am,
Faithfully yours,
A. MACLEAN
Weed Inspector, M.D. Lambton 306

Minutes of M.D. Council of Lambton

The Council met at Delia on Saturday, May 4th, at 8 p.m. All Councillors were present.

Minutes of the previous meeting were read, and on motion of coun Hawkins were adopted.

A letter was read from Mr. McQueen, Government Engineer, advising that our capital grant this year would be $1,500.00.

Mr McQueen was present at the meeting. He distributed to each councillor a copy of instructions and specifications to be followed in working out the capital grant. Mr. McQueen said that deductions from the grant would be made in all cases where the work did not measure up to the specifications In connection with the income grant of $1,358.00, Mr. McQueen stated that this could be earned on any road in the district, and that for this grant the only requirements were that at least $100.00 be located to any one piece of work, and that the work done be of a reasonable type and properly finished It was moved by coun. Chapman and carried that the Government grants be spent on the following locations:—

CAPITAL GRANT

From East of 31-31-16-4 to East of 19-30-16-4 ..... $1,100.00
From East of 18-32-17 4 to North of 31-32-17 4 ..... 400.00
$1,500.00

INCOME GRANT

East of 20 & 21 and North of 33 to 36 all in Twp. 32-18 4 ..... $400.00
East of 31-31-18 4 and East 6-32-18 4 ..... 150.00
East of 8-32-16-4 South to railway track 200.00
East of 17 31-16-4 North to railway track 100.00
South 3 & 4 31 16-4 ..... 100.00
Between 19 & 30-31-17-4 ..... 158.00
East of 14-31-18-4 to East 14 26-18-4 ..... 250.00
$1,358.00

Mr. Henry Boon was at the meeting and asked the Council for a road into the N.E 17-33-18 4 which he had recently purchased.

Moved by coun. Chapman that coun. McDonald be authorized to arrange for a road for Mr Boon. Carried.

Mr. Jenson, of the Richardson Road Machinery Co., a representative of Canada Ingot Iron Co., and Mr. Limpert, representing Western Steel Products, were present and spoke to the council regarding road machinery and culverts.

Coun Simpson reported that Geo. Durham was trying to get out from the Salvation Army home and get some employment again this Spring Secretary was instructed to apply for pension for Durham.

It was decided to call the next meeting at Craigmyle at 10 a m on June 1st, and that the Council would then look over the gravel pit, and also the railway crossing east of Craigmyle.

Secretary advised that he had advertised the N E. 1-33-16-4 for sale for the 14th of June.

Coun. Nelson said Kirkeby had spoken to him about cropping the land this year The Council considered it was better to have the land cropped than to let it lie idle, and it was moved by coun Nelson that we let Kirkeby crop the land this year provided he gives the Municipality, or the new purchaser, a one-third share clear. Carried.

Secretary read a letter he had received from Michichi Municipal District. In view of the fact that the collectable amount would be so small it was moved by coun. Chapman that we do not assess any mineral rights. Carried.

Coun. Chapman moved that the vote of confidence in Mr. Boon passed at the meeting of the 18th of March be published in the paper. Carried.

Moved by coun, Simpson, Hawkins, that coun, Nelson be Reeve.

Moved by coun, Martin that nominations close. Carried.

Coun. Nelson was therefore elected Reeve for the balance of the year.

On motion of coun. Hawkins, coun. Simpson was elected Deputy Reeve for the balance of the first half of the year.

Moved by coun. Martin that we order belting for lowering caskets for Craigmyle and Delia cemeteries. Carried.

Mr. Boon explained that according to the new weed act the Municipality was now liable for weeds on road allowances and not the individual farmers.

The Council gave Mr. Boon authority to have weeds attended to on road allowances.

Moved by coun. Chapman that accounts as presented be paid.

Moved by coun. Martin that we adjourn. Carried.

A letter was read from Consumers Lumber Company.

Mothers Day

The largest gathering of people attending a Sunday service, for some time, were present at the special Mothers' Day session of the Sunday school in the United Church. Over two hundred took part in the service including quite a number from the country. The program prepared by the Religious Education Council was largely followed. The special feature of the session was a pageant, giving the life-story of a young man. This was interspersed with a number of appropriate selections sung by the choir and people. Some considerable time was spent in the preparation of the program and thanks are extended to all who made the service a success.

The theme of the evening service was "Our Mothers and Motherhood." Reports were passed because the dramatization of the Mothers of the Bible could not be given as announced. However the presence of the choir was much appreciated, as also the solo, "Mother Machree," by Mr. A. S. Newcombe added to the harmony of the service. The church was well filled with men, women and children; the type of congregation that delights the heart of any minister of the Gospel.

Thanks are extended to the ladies for the fine display of flowers. They added their part to the tribute of "Mother', and "Mother's God."

The morning offering amounted to $26.25 which is being devoted to the work of the Religious Education Council of Alberta.

Card of Thanks

Mr. and Mrs. (Dr.) A P Jesperson wish to thank the neighbors for their kindness; and all those who took part at the Flowing Bee and assisted with all other work. Particularly the ladies.

New Bulletin on Weed Problem Issued

Alberta's Weed Problem, Bulletin No. 8, has recently been issued by the Field Crops branch of the Alberta Department of Agriculture, and is now available for distribution through the office of W. J. Stephen, Field Crops Commissioner. This publication brings up to date much valuable information dealing with the control and eradication of noxious weeds in the province, and will be read with attention by farmers and others interested in this problem.

You can't fool a woman by lying to her, unless it's a compliment.

Health Service of the Canadian Medical Association

SPRING MEDICINE

There is a tradition that when spring comes, we require some spring medicine to purge our bodies of the winter poisons. In the days of the early settlers in Canada, winter did mean misery and sickness, much of which disappeared with the coming spring. The sickness associated with winter, among the pioneers, was largely due to their poor diet. Salted meats were their chief food, and there was a lack of vegetables and fruits. In addition, they lived closely crowded together for the sake of warmth.

In our times, our diet in winter can be sufficiently varied because modern methods of preserving foods and up-to-date means of transportation allow us to secure and use fresh vegetables and fruits, or properly preserved vegetables and fruits all winter. Modern heating systems have made it possible for us to be comfortable during the winter, and there is no reason why we should not live and work in ventilated rooms and so secure the fresh air we need.

There is no reason to take spring medicine. There is reason, however, to look forward to spring and to make use of the advantages which that season brings. Compared with winter, this means that in the spring we can be out in the fresh air and sunshine. The only spring tonic we need is Nature's tonic which costs nothing and so can be taken by rich or poor, old and young, without a thought of expense. Nature's tonic is made up of fresh air and sunshine. It is ours for the taking. We must do the taking, however, if we are to benefit by it. The sunshine and air doors which makes the flowers and the grain grow will not do us any good unless we get out into it and take our share of it.

Personal health cannot be bought by money; it is not to be found at medicine men or doctors. To secure health and to keep it, we must spend our time. We must take time to secure the spring tonic provided for us in Nature's fresh air and sunshine.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College St., Toronto, will be answered personally by correspondence.

Can. Forestry Association

HAVE YOU GOT YOUR PERMIT?

Thousands of travellers in the woods, more than ever before because the travel permit areas are being extended, will be accosted this year with the question, "Have you got your permit?" The fire ranger who asks you this question may or may not be in uniform, but if you are not, doubt as to his authority he can show you his badge.

Why are you asked to obtain a permit to travel the woods that belong, you have heard it repeatedly said, to the people of Canada? Simply to assist your guardians of the forests, who receive support after all only as your staff, to protect your forest wealth. It you wish efficient forest protection at a minimum cost, then you must do part of the protection work yourself. It must be a co-operative affair, or otherwise your representatives — the fire rangers — must fail. In a word, it is perhaps the lack of your individual cooperation might pass—there might not be disastrous results from some careless action with fire on your part or on that of the party of which you are a member; but you as a novice in the fire fighting game don't know enough and consequently cannot afford to take any chances with fire, whether you think it safe or not. For all you know, it may be a dangerous period or it may be even a fire year.

Hence the permit, and the reason for some valuable hints for your observance printed on the permit form.

Soil Survey in Lethbridge Northern

An intensive soil survey of the Lethbridge Northern Irrigation district will be undertaken within the next two weeks A classification of the lands in the district will also be made with a view to ascertaining the productive capacity of each quarter section in the district. The work will be carried on under the direction of Stephen Ward, who has had a number of years experience in this type of survey with the department of soils at the University of Alberta

New Chrysler-Plymouth Full-Size Motor Car

The full-size of the new Chrysler-built Plymouth is in striking contrast to the small dimensions usually associated with lowest-priced cars. Plymouth is a full-size motor car in every way.

With the introduction of Plymouth, the day definitely passed when a small price automatically implied a small car.

Full-size, however, is only the beginning of Plymouth's superiority. Plymouth's value and popularity are based on a great deal more than size and comfort alone.

Chrysler designed—Plymouth likewise sponsors all that is new and advanced in style and charm.

Chrysler engineered—it excels in power, in pick-up, and in sustained high speed, affording big-car steadiness and typical Chrysler smoothness under all conditions.

Know, too, that Plymouth has big-car solidity; big-car dependability, big-car safety and sureness. Beneath its full-size body are a full sized rugged chassis; full-size axles; full-size springs with compensating, shock-absorbing leaves, and Chrysler full-size westinghouse internal-expanding hydraulic brakes on all four wheels. Best of all, Plymouth's low first cost is followed by *remarkable and consistent economies* in gas, oil, tire mileage and general upkeep.

In Plymouth, Chrysler Motors has gone to limits never before approached in the lowest-priced field, to include the qualities and improvements characteristic of its highest-priced cars. Take ten minutes to study Plymouth; take another ten minutes to try out its performance, its riding qualities.

Then you will realize how impossible it is to surpass—or even match Plymouth value at any where near Plymouth's new low prices.

DEALER

Everything you want or need in a modern automobile

Ford

Until you ride in the Ford car—share its comfort—know the thrills of guiding it easily and safely through thickest traffic or stepping it up on the open road, you cannot begin to appreciate the value that has been built into this car.

It is difficult to believe that so much beauty, quiet comfort, safety, speed and power can be had at such a low price.

The low price of the Ford car and its exceptional performance are the result of manufacturing practices as unusual as the car itself. This car is more than a new automobile.

It is the advanced expression of a wholly new idea in modern, economical transportation.

For here, at a low price, is everything you want or need in a car—beautiful low lines and choice of colors; remarkable acceleration; 55 to 65 miles an hour; smoothness at all speeds; four Houdaille hydraulic shock absorbers; shatter-proof glass windshield; a low first cost and economy of operation and Ford reliability and long life.

Come in and let us demonstrate the performance of this car. You'll get a real thrill in driving it.

The Power Of Small Things

The following item was recently printed in a large number of newspapers:

"Forty-five years ago there was a strike in an Ohio coal mine. A group of enraged miners took a car of coal, set it afire, and pushed it down into the mine. That fire is still burning under ground, spreading many miles, destroying valuable coal deposits and rendering hundreds of acres of surface ground sterile. Today it threatens to destroy a school building and some homes in a village. Burning beneath them, it is undermining the ground and may cause them to collapse. The fire that a moment's anger started 45 years ago certainly turned out to be a bigger thing than the men who started it ever imagined."

There is a moral to this incident which might well be heeded, for, after all, it is but an illustration, a spectacular one, it is true, of almost every day happenings. The moral is that a small act may have far-reaching consequences, either for good or for evil.

A man kicked over a lamp in a barn in Chicago, and the Great Chicago Fire resulted.

A frenzied student assassinated an Austrian Grand Duke and his wife, and the Great War was the immediate outcome with its sacrifice of ten millions of lives and hundreds of billions of dollars in property and other losses.

An employee is dismissed in anger, and perhaps unjustly, and a nation-wide strike follows bringing suffering and ruin in its wake.

A careless workman, or a dishonest contractor, neglects to put a sufficient quantity of cement in the foundations of a building or in the piers for a bridge, or the retaining wall of a dam, and disaster follows taking heavy toll in human lives.

A rotten timber is used in building a ship, and the vessel sinks; a faulty rail is laid in a track, and a train is wrecked; a careless camper neglects to put out a fire, and a terrible conflagration wipes out a forest.

And how often has a hasty word, an insulting remark, led to family and business estrangements with dire results to all concerned.

How often, too, has the peace and friendliness of an entire community been destroyed because of the whispered scandal, the unguarded reflection upon the honor and integrity of another, the prejudiced utterance casting aspersions upon those of different races or religious beliefs.

All little things in comparison to their terrible effects and disastrous results;!

Fortunately, for the human family, the reverse is also true.

We still recall our childhood's interest in the story of the little Dutch boy who by sticking his finger in the small hole in a dam saved his country from inundation. We delight in the personal histories of great men and women who were started on their careers by the kindly, encouraging word of some friend.

We know, too, by personal observation that the mighty oak is born of the humble acorn; that it was in a single kernel of wheat the hundreds or millions of bushels of Marquis wheat annually harvested in Western Canada had their origin.

If we would but remember and give heed to the fact that, just as a pebble thrown into the water causes ever widening circles of little waves to wash upon a distant beach, so every thought we think, every word we speak, every deed we do, every act of ours create little circles of influence radiating out into our homes, our offices, our communities and the world at large, and, for good or evil, affecting the lives and future welfare of men of our country, then, perchance, we would be more careful, more considerate, a little less hasty and impatient of others, and more inclined to extend that degree of sympathy and tolerance to others which we naturally expect will be displayed towards us.

Livestock Producers

Eight Provincial Organizations Join Hands To Form One Body

Canadian livestock interests were linked up in a single organization in Winnipeg the other day, when representatives of eight provincial live-stock co-operative bodies formed the Canadian Co-Operative Livestock Producers, with headquarters in Toronto. W. D. McKay, of Moose Jaw, president of the Saskatchewan Live-stock Producers, was elected president; H. B. Clemes, of Toronto, manager of the United Farmers of Ontario, vice-president and treasurer, and J. K. King, of Moncton, N.B., manager of the Maritime Livestock Marketing Board, travelling secretary.

Asthma Doesn't Wear Off Alone.

Do not make the mistake of waiting for asthma to wear away by itself. While you are waiting the disease is surely gathering a stronger foothold and you live in danger of stronger and yet stronger attacks. Dr. J. D. Kellogg's Asthma Remedy taken early, will prevent incipient condition from becoming chronic and saves hours of awful suffering.

I noticed your wife sitting by the window sewing this morning. I thought you told me she was ill?" "So she was; but today she's on the mend!"

A town is made beautiful by each one doing his share in fixing up his own property. It's a case of "You in your small corner and I in mine."

Local Option In India

Voters In Town Of Taran Went "Dry" To a Man

An astonishing thing has happened in the Punjab. Citizens of the town of Taran have lately accosted representatives of eight provincial live-stock co-operative bodies formed the Canadian Co-Operative Livestock Producers, with headquarters in Toronto. W. D. McKay, of Moose Jaw, president of the Saskatchewan Live-stock Producers, was elected president; H. B. Clemes, of Toronto, manager of the United Farmers of Ontario, vice-president and treasurer, and J. K. King, of Moncton, N.B., manager of the Maritime Livestock Marketing Board, travelling secretary.

Brandon Aero Club

About fifty applicants for membership to the Brandon Aero Club are under consideration, and a number being more than that required to form a club. The school of instruction has secured favorable rates and it is figured that the approximate cost to the students will be about $200.

There is no poisonous ingredient in Holloway's Corn Remover, and it can be used without danger or injury.

The typewriter is credited to C. L. Sholes, printer editor.

Simple Precautions Against FLU Sore Throat — The Danger Signal

Health Authorities Point Out The Necessity Of Treating The Simple Cold At Its Beginning

Nearly every case of "Flu" starts with a simple cold. At first the throat is sore—often just a little hoarse—soon the infection goes lower—then the chest is affected. A safe plan is to gargle the throat three times daily with "Nerviline"—this will keep the throat free from germs. If there is any sign of tightness in the chest, rub on Nerviline—every drop will penetrate deeply—congestion will be relieved—the cold will break up quickly. Many a dangerous case of "Flu" can be avoided by this simple home treatment.

Of course it is always wise to take some relaxing medicine, and for this purpose immediate results will be secured from Dr. Hamilton's Pills—they purge the system of impurities and carry off a lot of disease—breeding waste.

This combination treatment of Nerviline and Dr. Hamilton's Pills is very effective for Grippe, Influenza, Bad Colds, etc., and can be relied upon to give very satisfactory results.

Magnetic North Pole Reached By Canadian

Wireless Message Has Been Received From Major Burwash

A wireless message from under the mythical shadow of the Magnetic North Pole is the latest achievement of Canadian science.

Within a hundred miles of the place where Sir John Franklin and his men disappeared and died, Major L. T. Burwash, Canadian explorer, engineer and scientist, has sent word to the Northwest Territories branch of the ministry of the interior of his safety and whereabouts.

Major Burwash went into the Arctic alone over a year ago to make scientific observations at the Magnetic Pole, and to search for further relics of the Franklin expedition. Where Franklin and his men perished and died of starvation, Burwash lived on and carried out his scientific mission. He has now been ordered by the government to make investigation into the long-famed copper deposits along the Coppermine River.

WOMEN WHO SUFFER

Anaemia Responsible For Most Of the Ills Of Girls and Women

Medical science shows that most of the ills that afflict growing girls and women are due to the fact that the blood is either poor in quality or deficient in quantity. This anaemia is the cause of low spirits, languidness, the poor appetite, breathlessness, and the aching backs that make life a burden for so many women. There is no need for any woman to suffer in this way, for all the miseries of anaemia may be easily banished by taking Dr. Williams' Pink Pills. It is the blood-building qualities of these pills create an abundance of new rich blood—their wonderful reputation is based on that.

Thousands of formerly weak and ailing women have gratefully testified to the fact that they owe their restoration to health to Dr. Williams' Pink Pills. One of these is Mrs. Napoleon Gallant, Tignish, P. E. I., who says: "Among those who can strongly recommend Dr. Williams' Pink Pills before I began using them I was in an extremely weak condition. I could not sleep, neither could I eat, and was constantly growing weaker. I got medicine from a doctor, but it did not seem to meet my condition, and then, on the recommendation of a friend, I began to take Dr. Williams' Pink Pills. By the time I had taken a couple of boxes there was no doubt they were helping me. I continued using them until I had taken six or seven boxes when I was again in the best of health. I always keep Dr. Williams' Pink Pills in the house, and if occasion arises, if I did not feel run-down the pills soon put them in good condition."

The best time to begin taking Dr. Williams' Pink Pills is the moment you feel the least bit "out of sorts." The sooner you do so the sooner you will regain your old-time energy. You can get these pills through any medicine dealer or by mail postpaid, at 50 cents a box from the Dr. Williams' Medicine Co., Brockville, Ont.

Agricultural Wealth Of Canada

Figures Show the Importance Of Our Basic Industry

The gross agricultural wealth of Canada for the year 1928 is estimated at approximately $8,027,301,000, an increase of $19,353,000 over the 1927 estimate.

The total agricultural revenue of Canada for the year is placed at $1,720,304,000 with the following allotments for the nine provinces: Ontario, $500,821,000; Saskatchewan, $392,603,000; Quebec, $277,050,000; Alberta, $264,028,000; Manitoba, $148,887,000; British Columbia, $50,715,000; Nova Scotia, $40,162,000; New Brunswick, $34,307,000 and Prince Edward Island, $21,750,000.

British Soldier Families

Among recent newcomers to Canada were 38 families of British soldiers. These families totalled 164 individuals and their migration to Canada was sponsored by the British Legion Canada, in co-operation with the colonization department of the Canadian National Railways and the Cunard Line. Several more family movements under the same auspices will take place during the year.

Worms, feed upon the vitality of children and endanger their lives. A simple and effective remedy is Mother Graves' Worm Exterminator.

Satisfied Money Was Safe

A man deposited $10,000 in a bank. A few weeks later he approached the teller and demanded his money. He was asked if he did not want to leave a small balance. "No," he persisted, "I want my money." So the teller counted out $10,000. By this time a line of people had collected, each one waiting his turn. The man pounded the bills very carefully and handed them to the teller.

"Here," he said, "put it back. I only wanted to see if it was all there."

The International Boundary

The work of keeping the International Boundary between Canada and the United States in a state of effective demarcation was made one of the functions of the International Boundary Commission by a treaty signed at Washington on February 24, 1925.

A dentist is the only person who can tell a woman to open and shut her mouth at will and get away with it.

Modern Farming

Automatic Machines Used Would Amaze Many City Dwellers

The combine, the machine which cuts and thrashes grain in a single operation, is an outstanding example of the use now being made of once impracticable ideas. There are 60,000 of the machines in use in the grain belt today, 20,000 in Kansas alone, says Farm Journal, and each of them have been sold within the last five years. Yet the combine was invented, patented and actually built in the Middle West prior to 1848—eighty years before it came into its own.

Other machines which would amaze the city dweller with their efficiency are automatic corn pickers, mechanical potato diggers and planters, automatic poultry feeders that cover a field in a fraction of the time once required by a crew of farm hands to fill seeds, and corn and cotton planters, which enable one man to care for a crop of 250 to 400 acres where once his limit was fifty acres.

Encouraging Business Outlook

Volume Of Business At a High Limit For First Three Months Of Year

Business activity generally in Canada during the first three months of 1929 will be greater than any similar period since the record was first compiled in 1924. The total value for the first three months of the present year was 15 per cent. greater than in 1928, and 33 per cent. greater than the aggregate in the same period of 1927, the total in the first three months of 1929 being $11,505,000,000.

Short of Breath Smothering Feelings Choking Sensation

Mrs. H. Day, Dartmouth, N.S., writes:—"For over a year I was troubled with smothering spells and shortness of breath, that it was impossible for me to walk, even a short distance, because of the choking sensation which followed.

After trying many treatments, in vain, I at last decided to try

and in a surprisingly short time they did me much good.

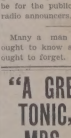
One of the newest dictionaries gives two pronunciations. One must be for the public and the other for radio announcers.

Many a man forgets what he ought to know and knows what he ought to forget.

"A GREAT TONIC," SAYS MRS. RUSSELL

After Taking Lydia E. Pinkham's Vegetable Compound

Fenwick, Ont.—"I am taking Lydia E. Pinkham's Vegetable Compound



and I find it a great tonic and I have taken a dozen bottles of it. I can recommended to me by a friend and now I recommend it to all women for such troubles as seems at this time."—Mrs. W. Y. Russell, R. R. No. 5, Fenwick, Ontario.

Wireless Phones For 'Planes

Recent Tests At Hadley Field Prove Very Successful

Airmen at Hadley Field, N.J., were presented with the means of speaking from cloudy peaks with their bosses, their sweethearts or anyone else of the earthbound millions who have access to a regular telephone instrument.

The Western Electric Company demonstrated in a series of tests for the press an invention linking planes in the wing to the last lines of the commercial telephone system.

The first call was put through by an Associated Press reporter who went aloft in the flying telephone booth. Wearing a regular telephone headset and speaking into a microphone held in his hand, he gave the telephone number of the Associated Press office in New York to the Bell Telephone experimental radio station at Whippany, N.J., by wireless telephone.

A moment later he heard the Associated Press switchboard operator respond and was switched to the city desk, which in turn, handed the call over to a re-write man who took the report of the demonstration from the flying reporter.

Though the reporter in the plane was sitting but four feet from the roaring engine from which he was separated only by a thin glass partition, he could hear the people in the New York office as clearly as an ordinary 'phone conversation and his words were plainly audible in New York.

Canada Week In Glasgow

Prizes Given For Best Display In Grocery Stores

A "Canada Week" was held recently in the city of Glasgow, Scotland, under the patronage of Hon. Peter Provost Sir David Mason. Canadian products were featured throughout the week and attracted great interest among the populace. It was the first shopping week to be organized by the Dominion in Glasgow. Cash prizes to the value of £60 were awarded for the best displays of Canadian products in grocery stores.

In England, also, Canada Week was observed at John Barker's great London store, where many show windows and a large floor space were devoted to the displaying of Canadian foodstuffs.

Cutting Corns With Razor Leads To Lock-Jaw

Don't cut corns with an old razor blade. Recent tests show that lock-jaw death may result from paring corns and an infected corn. Instead, get relief corns from using PUTNAM'S CORN EXTRACTOR. If afflicted with corns, callouses or sore feet-lumps, use "PUTNAM'S"—it's reliable, and sure to stop pain at once for so they drop right off. No pain, no soreness, but quick relief when the corns come to all who use PUTNAM'S PAINLESS CORN EXTRACTOR. 25c. at all druggists.

Final Production Of Radium

Particles Expelled In Final Analysis Appear To Be Lead

Radium is practically the most expensive product in the world and is valued at approximately $2,000,000 an ounce. Now hospital authorities are cautious how their contact with radium are slowly transmuting themselves into one of the commonest metals, and they are busily studying rates, which cannot be controlled by any known scientific methods, it expels the particles from its nucleus, and these five particles are atoms of helium. Radium is a very heavy element, its atomic weight being 225; helium is one of the lightest of elements, with an atomic weight of 4. Thus the original radium after expelling five helium atoms has an atomic weight of 225—4 x 5, or 205. And 205 is practically the atomic weight of common lead. It seems certain, therefore, that the final product of this rare and costly element is simply lead.

Takes Millions Of Years

It has recently been computed that the most remote objects made visible by the largest telescopes are so far away that it takes light, travelling at 186,000 miles per second, 140 million years to span the distance between them and us.

Will Hold Ploughing Matches

Some thirty-five points in Saskatchewan have already signified their intention of holding ploughing matches or ploughing demonstrations this year and it is expected there will be still more.

Customer—You say this material is the very latest fashion?

Assistant—The very latest madam.

But will it fade in the sun?

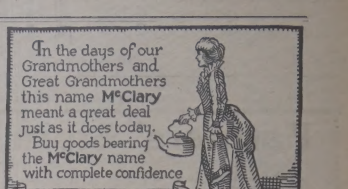
No, it's been in our window for two years.

For five cents a tourist can ride for hours around the city of Berlin. A system of transfers makes it possible to change at will from street car, auto bus or subway without paying extra fare.

Asked what he understood by "foreign entanglements," a schoolboy replied. "Spaghetti."

A nautical mile is 6,080 feet, or 800 feet more than a land mile.

Minard's Liniment for cuts and bruises.



A Valuable Pullet

Owned By University Of Saskatchewan, Is Establishing a Record

The Barred Plymouth Rock hen belonging to the poultry department of the University of Saskatchewan, which laid 239 eggs in her pullet year, creating a new world record, has a daughter which now promises to surpass the paternal record. The daughter hen, hatched on February 23rd, last year, laid her first egg on September 3rd, and up to April 12th, had laid 215 eggs, or ten more than her mother in the corresponding period.

Worms are encouraged by morbid conditions of the stomach and bowels, and no subject. Miller's Worm Powders will alter these conditions almost immediately and will sweep the worms away. No destructive parasite can live in contact with this medicine, which is not only a worm destroyer, but a health-giving medicine most beneficial to the young constitution.

Age No Bar To Flying

Lindbergh Says Properly Trained Pilot Is Always Efficient

Lindbergh will be flying as long as he can drive an automobile, he told a group of reporters recently in answer to the query as to whether he expected to taper off his flying as he grows older. In the opinion of America's foremost pilot, an aviator skilled in youth can fly as long as he can drive a car. Recently he disposed of the oft-repeated conjecture that he might give up the air as greater responsibilities caused many persons to think that he would be safer on the ground.

"I see no reason why I shouldn't fly," said Colonel Lindbergh. "If a pilot has been properly trained he is just as good when he is old as when he was young. Most of the best pilots in service today are getting along in years."

New York City claims a population equal to that of the states of Montana, Nevada, Utah, Idaho, Colorado, Arizona, New Mexico, Wyoming, North Dakota and South Dakota combined.

The World's Air Centre

British Ports Will Be Headquarters In Next Decade Is Prediction

Only a decade or two hence and airplanes and airships may be leaving British ports for all quarters of the Empire and of the world as regularly as steamers do now. From coach to railway from sailing ship to the steam and oil-driven leviathans of today, from the horse to the car, from the balloon to the airplane the great job of annihilating time and space goes on. And at each new step, in each successive phase, British inventiveness, British engineering, and British pluck are to the fore. In the air as on the waters, Nature has marked us down as the centre of the world.—London Daily Express.

Plant a Tree

If every householder would plant one or more trees, it can be seen what a great difference would be made in the appearance of the community. The man who plants a tree does something for the city, for the present generation and for posterity. Trees are cheap and easily had. Why not plant one or more this year? Plant shrubs too, for they add much to the beauty of any home and say city.

Farm Is Best

With grade cows selling for more than $100 at auction sales, with all farm products selling at high prices this is not the time for young men to be leaving the farm and going to the cities to work for a bare, and often a miserable living.

Splitting Headache

Minard's will drive it away. Bathe the forehead. Also inhale.

MINARD'S "KING OF PAIN" LINIMENT

All These Advantages For Farm Construction

For both old and new construction Gyproc gives more advantages than any other material. Makes durable, permanent walls and ceilings in less time and at less cost. Cannot warp, shrink or burn, and is ideal for lining houses, garages, poultry houses, barns, grain bins and all other farm buildings. 218

GYPROC Fireproof Wallboard

Present Wheat Situation Was Foreseen By The Pool Officials

Winnipeg.—Wheat congestion on the eastern seaboard is not the result of any action by the Canadian Wheat Pool, Canada's report issued by E. B. Ramsay, general manager of the Central Selling Agency of the Canadian Pools.

"Our view of the situation is that the supposed world surplus is more apparent than real," says the Ramsay report. Figures are quoted at length to uphold the opinion, and comment is included that "the United States have thoroughly advertised that they have a large surplus of wheat which they do not know what to do with."

The present situation was anticipated by Pool officials, the report states, giving the anticipation as reason for the quite conservative spring interim payments.

Stating that the Pool feels no anxiety over its present stock of wheat, and that it is not in financial difficulty, Mr. Ramsay labels comment in the market reports as to Pool operations as "95 per cent. pure surmise."

Further, Mr. Ramsay says that no one of the organization's officials has resigned or is leaving and denies that a high official of the pool has been recalled from Europe for the purpose of discussing the situation.

Saskatchewan Election Date

Premier Gardiner Announces Nomination Day May 30, and Elections June 6

Regina.—Tuesday, June 6, is the date set for the Saskatchewan provincial elections, Premier J. G. Gardiner has announced. Nomination day will be Tuesday, May 30, when candidates for the 63 provincial ridings will be nominated.

Premier Gardiner will issue a statement on the issues of the campaign some time during the present week.

The elections in the two most northerly ridings of Ile a la Crosse and Cumberland will be deferred. Elections in these constituencies are governed by special legislation providing that the proclamation of the returning officers must be posted for three weeks prior to nomination day. Difficulties of travel by canoe on the rivers and lakes in these constituencies make it impossible to hold the elections at the same time as in all the other ridings.

Disappointed In Arms Parley

Stresemann Discusses Failure To Reach Definite Decision

Berlin.—Gustave Stresemann, foreign minister of Germany, discussed disarmament and the Paris reparations negotiations in a speech at the annual banquet of the Foreign Press Association. Although he specifically disclaimed any desire to give a pessimistic touch to those situations, yet his remarks, especially regarding disarmament, showed disappointment and even alarm at the failure of the Geneva conference to reach concrete and definite decisions.

Ice Breaks Up On Yukon

Dawson.—The ice in the Yukon river in front of Dawson hotel moved out on May 7, heralding the advent of spring and summit pleasures in the guessing contest on the movement of the ice was divided between Thos. Lee and Duncan, Alfred Kennedy and Grace Stewart, of Anchorage, Alaska. The approximate amount of the prize was $7,200.

Oratory Finals

Toronto, Ont.—The Dominion oratory finals will be staged here on May 22, it was announced. Several provincial champions will strive for the right to be Canada's representative at the international oratory championship in Washington on October 26.

Distress Freight Rate

St. John, N.B.—A distress freight rate for potatoes, of $1.31 per hundred pounds, from the Maritime Provinces to points in British Columbia, is effective from May 10 to June 20. Huge stocks of potatoes are still on hand in the Maritimes.

Given New Naval Post

London, Eng.—Admiral Sir Hubert Brand, commander-in-chief of the Atlantic fleet since 1927, has been appointed commander-in-chief of the Plymouth station. Sir Hubert, who has his flag in the new battleship Nelson, is now 59 years of age.

Falls From Flagpole

Toronto.—Toronto's best known "steeple jack," William Thomas McMillan, aged 62, was killed when the end of a 40-foot flagpole snapped, hurling him to the roof of a downtown business building.

Was Daughter Of Dickens

London, Eng.—Mrs. Kate Perugini, only surviving daughter of Charles Dickens, died in London, aged 89.

Eskimos Will Stand Trial For Murder

Judicial Party Will Have To Make Four Thousand Mile Trip

Edmonton, Alta. — Two Eskimos, now being held at Aklavik on criminal charges, are to be tried at that far northern point this summer before His Honor Judge Dubue, stipendiary magistrate for the Northwest Territories. According to word just received from Ottawa, R. C. Darling will be the crown prosecutor, while Joseph A. Clarke will be counsel for the accused, both having been appointed by the minister of justice.

A charge of murder has been lodged against Okshina, an Eskimo, who is alleged to have killed another native named Oksuk, at Bathurst Inlet.

Lily Sarniyak will be tried on a charge of infanticide alleged to have been committed at Bernard Harbor Point in the Yukon Territory. Both prisoners are now in the custody of the Royal Canadian Mounted Police at Aklavik.

Arrangements for the judicial party to leave Edmonton for the far north are being made by the Royal Canadian Mounted Police. It is expected that the party will leave here about June 1, the time to take passage on the first trip of S.S. Distributor after the break-up of ice in the Mackenzie River. The trip will take from six weeks to two months to complete.

Four thousand miles will be covered by the party before it gets back to the Arctic, it being approximately 2,000 miles each way from Edmonton to Aklavik.

Cannot Attend Function

Alberta Women Unable To Accept Invitation From England

Edmonton.—None of the five Alberta women were expected to visit England on June 17, when the Privy Council is to hear their appeal from the decision of the Supreme Court of Canada, which decision declared that they are not "persons" within the meaning of their national charter, the British North America Act, will be able to attend a great public function to be held in their honor in London.

The invitation, which also carried with it an offer of assistance, has been tendered by a group of women in Great Britain, including members of the imperial parliamentary and other notables who have achieved distinction in politics, business, the professions, literature, education and social endeavor.

The Alberta appellants are Mrs. Henrietta Muir Edwards, Mrs. Nellie McClung, Mrs. Louise McKenney, Hon. Irene Parlby, and Magistrate Emily Murphy.

Wheat Nipped By Frost

Grain In Brandon District Will Grow Again Say Farmers

Brandon.—Wheat shoots on hundreds of acres in the Brandon district have been nipped off by continued night frost. Grain that in some cases reached a height of six and one-half inches has been levelled. Farmers state that the grain will grow again with renewed vigor and some contend that the new growth will be a benefit, strengthening the roots.

Investigating Malady Among Horses

Saskatoon, Sask.—Dr. Seymour Hadwen, professor of animal pathology at the University of Saskatchewan, and a member of the Dominion research council, has gone to British Columbia at the request of the Dominion government to diagnose an unknown malady which is wrecking havoc among horses of the coast province. He is accompanied by Dr. H. M. Tory, president of the research council.

Alaskan Survey Planned

Washington, D.C.—Inventory of the vast resources in timber and hydro-electric power that lie hidden in Alaska's inaccessible interior and in southeastern Alaska is to be taken this summer by navy aviators. Flying photographers with multiple lense cameras will unfold the secrets of hidden lakes and inaccessible forests like a magic carpet beneath them.

New York Doctor Loses Radium

New York, N.Y.—Somewhere in New York, $25,000 worth of radium is smoldering slowly through the city conduits and threatening burns to anyone who touches it. It was lost by Dr. J. J. Eller, a skin specialist, who believes he left it in a taxi-cab.

For Boundary Commission

Washington, D.C.—James H. van Wagenen, of Iowa, was appointed by President Hoover as a member of the international boundary commission of the United States and Canada, succeeding the late E. Lester Jones.

Marooned Trains Released

Were Held Up During Ten-Day Blizzard In Northern Manitoba

Winnipeg.—Freed from northern snows by a let up in low temperatures, two Canadian National Railway work trains were able to proceed on the way to Churchill, the prairie outlet on Hudson Bay. Both trains had been held up during a ten-day blizzard that had swirled down from the northland almost to The Pas.

After days of almost unavailing effort the snow plows succeeded in battling through the trains, on one of which were 180 men en route to Churchill for the department of railways and canals.

AMENDMENTS TO ELECTION ACT TO BE FORTHCOMING

Ottawa.—Candidates should be allowed to hire automobiles or other conveyances to carry voters to the polls on election day, it was decided by the special committee of the House of Commons reviewing the Dominion Elections Act. Sec. 11, which makes it a practice an offence is to be deleted. There are at present one-third too many polling subdivisions in the country, the committee, Colonel O. M. Biggar, former chief electoral officer stated. Approximately $150,000 would be saved in each election by a revision of subdivision boundaries. Sec. 28 is to be amended to meet the difficulty.

Sec. 29 is to be amended so that an election officer guilty of a wilful act or omission shall be subject to a fine of from $200 to $500, and one half the fine is to go to the informer.

A new section, "3-A," was added, providing that election notices or documents may be fastened to posts or wooden structures despite any municipal bylaw.

Sec. 4 was amended so that although hand bills or otherwise must bear the name of the printer, the candidate cannot be unseated if the latter's name was explained that the section is to prevent anonymous material being circulated.

Farmers and labor organizations may hereafter contribute to election expenses as a result of removing Sec. 8. The action provided that no association could furnish money unless it was specially formed for election purposes. The chairman, C. G. Power, Liberal, Quebec South, said that the section operated unfairly in the case of farmers and labor organizations.

Plans Flight To Sweden

Second Attempt Will Be Made By U.S. Aviator

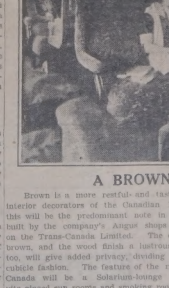
Chicago.—Another flight to Sweden from the Middle West is being planned by Bert Hassell, Rockford, Ill., aviator.

Hassell, who piloted the "Greater Rockford" on its projected Rockford-Sweden flight last summer and was forced down in the snow fields of Greenland, declared his next flight would be over a route with nine refuelling points.

Hassell predicted that within five years aeroplanes with "pay loads" will fly regularly between Copenhagen and Chicago. The route from Chicago to the northeastern coast through Canada to Iceland and Greenland, thence to the European mainland, is the safest possible to Europe, he said, with its longest stretch over water being only six hundred miles.

Falls In Altitude Test

Montreal.—After reaching a height of 17,000 feet, Captain M. E. Jones, chief pilot of the Curtiss-Reid Airport at Cartierville, was forced to give up his attempt to break the world's altitude record here. Jones made his attempt without the aid of oxygen and in an open cockpit 'plane.



A BROWN STUDY

Brown is a more restful and tasteful color, the car designers and interior decorators of the Canadian Pacific Railway have decided, so this will be the predominant note in the sumptuous new sleepers just built by the company's August shops at Montreal especially for service on the Trans-Canada Limited. The carpets and curtains will be a rich brown, and the wood finish a lustrous walnut. Permanent headboards, too, will give added privacy, dividing each section from its neighbour's cubicle fashion. The feature of the rear end equipment on the Trans-Canada will be a Solarium-lounge car, with green-tiled bath-rooms, vita-glazed sun rooms and smoking rooms for women as for men.

SPOKESMAN FOR GERMANY

Dr. Hjalmar Schacht, president of the Reichsbank, and spokesman of the reparations conference in Paris.

Suspect Grain Mixing

Think United States Soft Wheat Is Mixed With Hard Wheat Of Canada

Vancouver.—Possibility that some United States soft wheat is brought to this port and mixed with Canadian grain, is interesting the Saskatchewan Royal Grain Commission just now. Evidence has been produced that at least one such cargo from Seattle was in port, this spring, with a part cargo of soft wheat, and loaded the balance of the ship with Canadian grain. The port warden was before the commission, to explain just what safeguards there are to prevent anything of this sort. His evidence was clear on the point, that in such an event, no government certificate would be issued and consequently a mixed cargo, but that there was nothing to prevent mixing after the Canadian grain had been inspected into the vessel. In such an event, however, the Canadian certificate could not be construed as certifying to such a mixture, though overseas buyers might be deceived as to just what kind of cargo they were buying. It was pointed out that ships en route to the Orient from Seattle, frequently come in here for grain, and many of them have soft American grain aboard. There is a mixture made in Oriental ports of 25 per cent. Canadian hard wheat, and the balance soft, from the Pacific coast, but this is not covered by a Canadian certificate.

Fifty Airplanes Will Compete For Prize

All Types Entered In Race From Minot To Moose Jaw

Moose Jaw.—Fifty aeroplanes, of all types, speeds and sizes, the largest number that have ever flown across the international boundary in a body, will fly from Minot, N.D., to Moose Jaw in a race for $1,000 on July 3. The race is to be organized by the Moose Jaw Flying Club, and will be staged in connection with the monster aerial derby from Tulsa, Oklahoma, to Calgary, Alberta, an event which has been organized by Calgary Aero Club. The aerial derby is for a prize of $15,000.

Oppose Bill For Back Pay

Ottawa, Ont.—Five Manitoba Liberal members will meet caucus of the government they will oppose Hon. Peter Veniot's bill to pay $150, 000 to the postal workers who were on strike in 1918 and who failed to get back into the service. The dissenting Liberals are: Messrs. Glen, Lovie, Stedman and Mills. The measure, the bill will have to be radically redrafted or what is quite probable, dropped entirely.

Adopt Grade Crossing Bill

Ottawa.—Third reading was given in the Senate of the bill amending the Railway Act which provides for the expenditure of $200,000 a year to eliminate grade crossings.

Should Not Be Disfranchised

Committee Thinks Persons Receiving Charitable Aid Entitled To Vote

Ottawa.—The parliamentary committee on privileges and elections has decided to recommend a change in the Elections Act so that persons receiving charitable assistance would be allowed to vote. The act as it stands prevents persons receiving such assistance either by direct gifts or by living in a charitable institution, from voting.

The committee felt that with so many and varied forms of assistance now being extended to persons in unfortunate circumstances it would be too far reaching to disfranchise them all and it would be almost impossible to differentiate.

The committee refused to agree to the suggestion that the clause preventing judges from voting be eliminated. The general opinion seemed to be that the judges did not want the law changed, they did not wish to be placed in the position of either supporting or opposing the government by casting their ballots.

L. J. Ladner, Conservative, Vancouver South, argued it was absurd to disfranchise judges, but he considered it was an insult to the judges.

Must Watch His Colors

Party Workers In England Must Be Wide Awake

London.—The party worker who skips lightly from constituency to constituency during the present election campaign will have to keep a sharp eye for his colors. For by a curious practice in British elections, the party has hardly been accepted in every constituency. Sometimes the colors in one constituency are completely reversed in the next, occasionally it is a bit awkward for the party enthusiast who wanders far afield.

SAY POOL WILL NOT SELL GRAIN AT A SACRIFICE

Winnipeg.—If western wheat pools are influenced by the grain blockade at Port Colborne and Fort William, they are not concerned at the situation in which they are found. But they refuse to be drawn into the matter, according to Pool officials' statements in answer to Montreal allegations.

"We could alleviate the situation if we wanted to sell our grain at a sacrifice," commented a senior official, "but we refuse to make our grain cheap for a situation that is not our fault. Don't misunderstand. We are selling a certain amount—we are not refusing sales."

"The world surplus is not of our making. There is an enormous amount of grain in the world, and the buying is not here. If we could, we wanted to take sacrifice prices we could move the stuff, but we are not intended to penalize our farmers by doing it."

"Why should we relieve the congestion for everybody's benefit but our own? Montreal officials say that we 'goats.'"

Conclusion.—A report from Montreal which blames organizations of Western farmers for grain congestion at the port of Montreal and which suggests that compulsory acreage plans should accept a lower price is taken exception to here by George Bell, secretary of the United Grain Growers of Canada, Saskatchewan section.

"The report published by the Montreal Star," he says, "must have come from an official of the Montreal harbor commission, can hardly be regarded as a very fair statement."

Mr. Williams' statement continues: "The article finds fault with western farm farmers' organizations through the agency of the western pools are endeavoring to hold the price of wheat up to a level where it will pay the cost of production.

"The report indicates that the official of the harbor commission makes it very clear that the members of the harbor commission are being interfered with, and we note the solution is to lower the price of wheat.

"This has always been the solution of commercial organizations handling the farmers' crops, namely to pass on to the farmer any misfortune that may come up and safeguard the profits of the handling company. To cover up this fact they suggest that a drop of even a cent would relieve the situation.

"If this is so, how is it that a drop of nine cents in the open market does not relieve the situation? Can it possibly be that all the real wheat is in the hands of the pools, who are holding it for a sensible price, and that all the howling is about a lot of paper wheat in the hands of speculators, which does not exist in real bushels at all?

"Somebody ought to explain it."

Possibly 100 per cent. control of all the wheat by the pools might not be such a bad idea after all. Apparently its direct result would be to cut out a lot of market camouflage and let us know just where we really are."

Reparations Plan Would Be Unfair To The Dominions

Form Chamber Of Commerce

Canadian Firms Interested In Aviation Seek Incorporation From Government

Montreal.—With the rapid development of aviation in this country, a number of firms from Toronto, Winnipeg, Montreal and other points, practically interested in the subject, have decided to form an association for their mutual protection under the title of "Canadian Aeronautical Chamber of Commerce." Following a meeting here attended by thirty-five air craft and accessories representatives, a series of by-laws have been tentatively prepared.

Steps are now being taken to obtain government approval of the body and to seek incorporation.

In a statement issued the objects of the chamber were set out in part as follows: "To foster, advance and promote trade and commerce throughout Canada and foreign countries in the interest of those persons, firms or corporations engaged in the business of manufacturing, buying, selling, dealing in and operating air craft, air ports, air craft engines, air craft parts and accessories of every kind and description.

"To produce uniformity and certainty in the customs and usages of trade and commerce among its members."

John Hunter, of the Western Canada Airways, Winnipeg, represented western interests at the conference.

Eclipse Of Sun In South Seas

Thousands In Manila See Phenomenon Through Smoked Glasses

Manila.—The eclipse of the sun cast a shadowy streak across Polynesia and the South Seas.

Manila witnessed the phenomenon with great interest, as seen here, 90 per cent. of the face of the sun being obscured as the moon's bulk came between the solar rays and the earth. The obscuration cast a spell over the city, and did not prevent the sun from casting shadows.

If the natives feared the phenomenon there was no sign of it here. Thousands of all ages viewed the eclipse through smoked glasses or other improvised instruments.

Word was eagerly awaited from Iloilo, south of here, where five scientific expeditions located their instruments to view the phenomenon of a total eclipse.

To Circle the Globe

Plans Being Drawn Up For Graf Zeppelin To Make Flight Around the World

Washington, D.C.—The post office department was advised by U.S. diplomatic officers in Germany that plans are being made for the Graf Zeppelin airship to make a round-the-world trip, starting and ending at Lakehurst, N.J.

A trip from Germany to the United States and back is due to start soon, after which the post office department was advised the airship would return to this country to start circling the globe.

Frown On Practice

Toronto.—A warning to patent medicine companies against the practice of having sample pills and pellets mailed from Canada to Canadian residents thrown at the doors of householders for advertising purposes was issued today by Hon. W. H. Price, attorney-general, who ordered an inquest into the death of Audrey Gimmer, Kitchener girl, who died after eating pills that had been left at her door.

Phonograph Records Of Speeches

London.—Phonograph records of speeches of 19 leading politicians, including leaders of the three main parties, are being distributed for use in rural areas in the present campaign. A record will probably be prove of great value, apart from their immediate use, as interesting examples of personal styles of oratory.

Paris.—It was confirmed that the plan for revision of reparations payments by Germany, proposed by Owen D. Young, of the United States, at the reparations conference, would have Great Britain nothing for the Dominions or for arrears of interest on debt. It would award that country just enough from Germany to pay the U.S. from now on.

The British experts here refute the contention that this is all that is demanded in the Balfour note. They point out the note excludes reparations due the Dominions from its terms.

The absence of direct representation for the Dominions at the conference is considered by the British delegation as all the greater reason for not yielding on the question of the Dominions share of German reparations. The experts think it practically certain to reject that phase of the Young proposals which would reduce the German payments to the Dominions to zero.

The proposals brought forward by the U.S. delegate were by way of a compromise after the conference had become deadlocked on the amount Germany should pay. The Dominions, added to some of the allied demands and Mr. Young advanced a plan involving some reduction.

Riots Cause Controversy

Part Played By Police In Berlin Ruction Is Criticized

Berlin, Germany.—Bitter controversies continue in the Berlin press and among the public as to the part played by the police in suppressing the Communist riots which broke out on May Day, culminating in the examinations of twenty-four victims of the riot are said to have revealed that 17 had been killed by police bullets.

The official inquiry has been unable to establish that a single shot was fired by a civilian against the police. Only one policeman of the 40-odd injured had received a bullet wound and this was said to have accidentally inflicted upon himself.

One hundred and fifty shopkeepers of the Wedding district, where rioting was said to have been very severe, declared that the streets were quite safe from Communist excesses and that simple police patrol would have sufficed.

Meanwhile, 45 persons of 117 arrested have been sentenced to short terms of imprisonment for breaking the peace. The rest were released for want of evidence.

Heads Victorian Nursing Order

Hon. Geo. P. Graham Re-Elected President Of Board Of Governors

Ottawa.—Right Hon. George P. Graham, was re-elected president of the Board of Governors of the Victorian Order of Nurses for Canada at the concluding session of the thirty-first annual meeting of the order here. Hon. W. K. McNaught, of Vancouver, is one of the four vice-presidents.

Tribute was paid to Mrs. James MacCauley, of Vancouver, and Mrs. William Dennis, Halifax, as "the two splendid women with whom the idea of the V.O.N. originated." Letters of gratitude and congratulations were sent from the conference to Mrs. MacCauley and Mrs. Dennis.

Miss Elizabeth Smellie, chief superintendent of the Order, gave a comprehensive resume of the work during the past year. Victorian Order Nurses attended 63,281 patients and made 515,156 visits, an increase of 34,666 over the preceding year. Of these 15,974 were free nursing visits.

Must Complete Line

Ottawa.—In a judgment handed down the Board of Railway Commissioners ordered the Canadian National Railway Company to complete the construction of a branch line in connection with the operations of the Gebo Coal Company, Ltd., in the Rocky Mountain forest reserve, in Alberta.

Maritimes Grain Rates Case Has Been Again Postponed Until July

Ottawa.—Application of the maritime board of trade for a reduction in grain rates from Fort William to St. John, N.B., and Halifax will be heard at three sittings of the board of railway commissioners, Chairman H. A. McKeown and his colleagues on the board, it was announced, will hold local sittings at St. John and Halifax some time in July. Later, a final hearing on the application will take place here.

A rate of 19.34 cents per hundred pounds on grain shipments from Fort William at the two ports on the Atlantic seaboard is sought by the application, as against the prevailing rate of approximately 34 cents. The rate now stands from Fort William to the port of Quebec under the general freight rate revision is now 18.34 cents a hundred pounds.

Hearing of the application was scheduled before the board here, but owing to the illness of Alistair Fraser, K.C., counsel for the Canadian National Railways, presentation of the case has been postponed until July.

ALBERTA MOTORISTS ENDORSE PLAN OF TRACTOR POTROLS

Alberta is squarely in line for a tourist invasion on a record scale this season. Reports from the south, from the east and also the west confirm expectations of this being a period when motorists in ever increasing volume will penetrate the scenic regions of this province.

The Alberta Motor Association has, in season and out, stressed the primary value and vital need of first-class highways in this province. As pointed out by President A. E. Mackay on various occasions, attracting of tourists to Alberta means a whole lot to the farmers and will spread undreamed of benefits to business conditions in this province.

Motorists have, therefore, found considerable satisfaction in the announcement that the Provincial Government is adopting a new highway maintenance scheme this year. The towns which are working on a 50-50 basis with the government will have the advantage of a motor patrol, in that power driven equipment will be on the job daily scarifying and dragging, thus carrying out a "blading" service. Pieces of roadway will be scraped and graded, which will mean that gravelled highways will be kept in proper shape and form a delight for the thousands of tourists who are planning to visit Alberta this year. Practically all of the towns on the main highways between Lethbridge and Edmonton will have the benefit of this "blading" service, while there will be only a nominal charge to cover the costs.

Boosters of oiled roads will also feel satisfaction over the announcement that the Government intends to continue its experiments on gravelled roads. While certain sections were subjected to intial tests last year, it is the intention to make further comparative examinations this season. When this is completed, it is believed that oiling will be launched on a fairly extensive scale in 1930. Under present plans, sections between Calgary and Bowness will be oiled, in addition to stretches of highway near Edmonton.

"SAFETY WEEK" IS WORTHY CAMPAIGN FOR ALL ALBERTA

With the accident toll on a fairly heavy scale in Alberta, there is a real necessity for towns and other district centres to adopt a Safety Week campaign. This has been introduced in other parts of the country and met with gratifying success.

The motor traffic season will soon be at its height. Not only will Alberta citizens be using their cars practically all of the time, but newcomers will be streaming in from all directions.

Under such conditions, the clarion call is for safety. To cut down the accident toll is a first duty of all drivers, and that can only be brought about by intrusting and observing safety measures.

Brake testing, headlight checking, and stressing of careful driving can be well emphasized in any safety week campaign. Even the period might be made longer without imparing its benefit one little bit.

In undertaking any safety campaign, towns and other municipal authorities will find that there will be 100 per cent support from officers, officials or members of the Alberta Motor Association. This club stands ready at all times to promote and obtain the fullest possible amount of safety for all motor drivers using the highways of this province.

Promotions in Telephone Service

A. M. Allen, district plant chief of the Alberta Government Telephone service at Calgary, has taken over the duties of construction engineer in this department, the position recently vacated by the resignation of W. O. Trettin. Mr. Allen's place will be taken by John Dow, plant chief at Lethbridge who will be succeeded by W. Ross, who has held the position of deputy plant chief.

GOOD ROADS

Completion of Jasper Highway this Year Assured By Federal and Provincial Governments

Urged as a primary necessity by the Alberta Motor Association, boards of trade and other bodies for years, it seems that 1929 will see the completion of the Jasper Highway as a passable motor route between Edmonton and the popular mountain resort. Furthermore, it will mean that an important link has been completed in another all Canadian route to the Pacific coast.

Announcements last week by Hon. O. L. McPherson, minister of public works for Alberta, and Hon. Charles Stewart, minister of interior at Ottawa, showed that the completion of the Jasper highway is assured this year.

The Alberta minister stated that this province was ready to undertake the completion of this highway if the Dominion authorities would agree to finish the eight miles on the park side. Providing the federal authorities would do their part, the province would complete its gap of about the same length east of the park and south of Obed.

Alberta was also asking the authority be given by Ottawa to enable this province to make necessary improvements to the abandoned grade between Evansburg and the park entrance. This work would include renewing or replacing culverts, widening the grade and other reconditioning for motor purposes. This is now being taken up with Sir Henry Thornton, president of the C.N.R., and Hon. C. A. Dunning, minister of railways. It was stated by the provincial minister that by the end of the season there would be a passably good road, dirt of course, but this would be ready for a gravelled surface in the near future.

The next day it was reported from Ottawa that Hon. Mr Stewart has stated that the federal government would do its share in completing the park section of the road. He said work had been under way for three years and it would be finished in 1929.

At its conventions for several years past, the Alberta Motor Association has passed resolutions pressing the governments to rush completion of the Jasper highway. The fact that the goal has at last been reached is a further demonstration of the good work being done by the Motor Association of this province.

Notable Increase in General Motors Sales for Quarter

More than usual prosperity is being experienced at Oshawa, Ontario, and other motor centres as the result of increasing popularity of Canadian-built cars. Latest manufacturer to report record achievement is General Motors of Canada, whose general sales manager, J. H. Beaton, made public recently the news that production and sales of General Motors cars for the first three months of 1929 exceeded by forty per cent the figures for the first quarter of last year.

At the end of the last working day in March the General Motors plants in Oshawa, St. Catharines, Walkerville and Regina had produced 34,565 cars and trucks since the first of January. This figure compares favorably with the total of 25,802 units produced during the same period of 1928.

To achieve the record production of the last three months the ten thousand workers in Canadian General Motors plants have turned out an average of more than 900 cars each full working day since the first of the year. To reach this average it was necessary to run complete cars off the assembly lines at the rate of practically one a minute during every hour worked.

Commenting on the record achievement, Mr. Beaton pointed out in an interview that the increased sales were not confined to one car alone, but were distributed among all the members of the General Motors family. Production of each one of the eight General Motors lines registered a substantial advance.

"Our Production schedule for the next few months are based on a belief that favorable buying conditions will continue throughout the Dominion, and that the steady increase in General Motors sales will be maintained," Mr. Beaton added.

Announce Reduction in Amusement Tax

The existing tax on low priced tickets of admission to such places of amusement and entertainment as moving picture houses, chautauquas, etc., has been cancelled by a recent order-in-council of the Alberta Government. Admission prices not exceeding 25c will hereafter be exempt from tax, the only exception being places for public dancing. The order is to be effective on June 1st. No change will be made in the case of tickets for which more than 25c is charged.

C.N.R. Building Program Authorized

Bills authorising the construction of Canadian National Railway branch lines from St. Walburg, Sask. to Bonnyville, Alberta, and from Allance to a point near Youngstown were passed at the Dominion House of Commons on Thursday. It is expected that construction will start at an early date on these lines which will open up large areas of productive land.

POINT ROBERTS B.C. BOUNDARY MONUMENT

Granite Shaft Marking Western Terminus of International Boundary Has Stood for 67 Years

The large boundary monument on Point Rogers on the eastern shore of the strait of Georgia, British Columbia, which marks the western terminus of the land boundary along the 49th parallel between Canada and the United States, was erected in 1861. The monument stands twenty feet high and is constructed of massive granite blocks. Due to the high price of labor at that time and place, the monument cost nearly $5,000, but its present excellent state of preservation after a lapse of sixty-seven years is evidence of the care and skill with which it was erected.

In 1818 it had been agreed that the 49th parallel should form the International Boundary from the lake of the Woods to the summit of the Rocky mountains. In 1846 it was further agreed that the 49th parallel should also be the boundary from the latter point to the middle of the channel which separates Vancouver island from the mainland. The original surveys of that portion of the International Boundary from the summit of the Rockies to the coast were begun in 1857 and finished in 1862, when a boundary vista was cut through the woods and marked with monuments in the more accessible districts. The task of maintaining the entire International Boundary between Canada and the United States in a state of effective demarcation was entrusted to the International Boundary Commission by a treaty signed at Washington in 1925 by representatives of the two countries.

Canada World Leader in Smelt Fishery

Canada's smelt fishery, prosecuted in Atlantic Coast waters only, is the biggest in the world, yielding annually about 75 per cent of the total world production. In 1928, unrevised statistics of the Fisheries Branch, 9,796,700 pounds of smelt were landed by the fishermen of the Maritime Provinces and Quebec, or 2,546,800 pounds more than in 1927. New Brunswick led in catch.

Smelt are marketed fresh or fresh frozen and very large quantities are exported to the United States. Out of the 1927 catch of 7,251,900 pounds 6,155,800 pounds were sold on the American market.

Co-operative Experts to Visit Peace River

Two combined institutes of co-operation and agricultural short courses will be held in the Peace River country this season, it is announced by Hon. George Hoadley, Minister of Agriculture. These will be at Fairview on June 18 and 19, and Grande Prairie on June 20 and 21. It is expected that a number of the outstanding speakers who will address the co-operative institutes to be held at other points in the province during the last week of June will be able to attend the northern meetings. Included in the program at each point will also be a number of addresses on various phases of agriculture such as have proved so popular at the agricultural short courses held at various points during the past winter.

Distribute Nitro-Culture for Legume Seeds

As in previous years a supply of nitro culture for the inoculation of legume crops is being prepared for distribution to farmers in the province by the Department of Bacteriology at the Vermilion School of Agriculture. The various cultures prepared are found to be of great value in the growth of mammoth red clover, crimson clover, white clover, sweet clover, alfalfa, Egyptian clover, silfalfa, vetches, peas and beans. Directions for applying the culture to these various seeds may be secured from W. J. Elliott, principal of the school.

Southern Alberta Dairy Pool Expanding

Construction of a new building in Calgary to house the head office of the Southern Alberta Dairy Pool has been decided upon. It is planned to continue operations in the present premises until the coming fall, when work will start on the new structure which will be similar in size and design to that now under construction in Edmonton by the Northern Alberta Dairy Pool. In the case of both buildings, financial assistance is being provided by the Government in the form of a construction guarantee under the new Co-operative Guarantee Act.

NEW POOL ELEVATORS

Between March 22nd and May 6th this year the Alberta Wheat Pool has purchased 22 local elevators and has 41 new elevators under construction. The new elevators being built are 35,000 and 40,000 bushels capacity, and the majority of those purchased are of 30,000 bushels capacity. The addition of these houses brings the total elevators owned by the Alberta Pool to 381.

Elevators have been purchased at the following points: Acheson; Bardo; Bazaar; Boyle; Cavendish; Chigwell; Coutts; Haynes; Hazeldine; Lacombe; Lousana; Midnapore; Oberline; Orion; Sabine; Spring Coulee; Spruce Grove; Stobart; Warspite; Whitelaw; Whitla; Villneuve.

Elevators are being built at the following points: Alix; Athabasca; Buoyant; Balzac; Barnwell; Bennett; Bittern Lake; Brooks; Broxburn; Clandonald; Coalhurst; Collholst; Conrich; Cowley; Charbonneau; Delacourt; Dismoud City; Dunsdale; Dissnt; Grainger; Grantham; Hay Lakes; Indus; Langley; Les Haras; Loyalta; Mirror; Morrinville; Nevis; Pearce; Pibroth; Raley; River Bend; Rosebud; Rosemary; St. Albert; Strasgmair; Two Hills; Wastagzan; Weiss; Vimy.

Extensive Development of Tar Sands Planned

Extensive investigation of the bituminous sand deposits in northern Alberta will be undertaken shortly as the first step in the two year program of development of this valuable Alberta resource by the Scientific and Industrial Research Council of Alberta. The work will be conducted under the direction of Dr. K. A. Clark of the University of Alberta, who for the past several years has devoted much time to investigations along this line. The two-year program of tar sands development is an additional feature of the Alberta Government's comprehensive plans for northern development. Keen interest is also being shown in the soil survey under the direction of Dr. Wyatt, the water survey carried on by Dr. Rutherford and the Pre-Cambrian mineral survey to be conducted by Dr. Cameron during the coming season.

Why should we think of posterity? It probably won't think much of us.

Why does nature give all the vehemence to the one who doesn't know?

If he sits on the hotel porch and talks loosely of million-dollar deals with the power interests, he is probably wondering whether his job will be there when he gets back.

The Pioneer Store
Phone 1

We have just opened a nice assortment of Ladies' Silk Pleated Skirts, with wool pullovers to match. All colors, at very reasonable prices.

Fancy Creton, beautiful patterns, 36 inches wide, at per yd. 35c

We still have some **Prints and Ginghams,** all widths, at per yd. 25c

300 Pairs **Men's Fancy Sox,** assorted colors, 5 pairs 95c

We carry a full line of the best quality GROCERIES on hand

Also Fresh Fruits and Vegetables

We still have some of our good **5 string Brooms** left, at each 50c

This store will close every WEDNESDAY Afternoon, commencing May 15th

Make Placer Tests Near Medicine Hat

Drilling operations to determine the possible location of valuable placer beds along the South Saskatchewan river near Medicine Hat have recently been undertaken. The work is being carried on by G. L. Holmes of San Francisco, and H. L. Beekman, who have had extensive experience in placer mining fields in various parts of the world. The tests will determine whether the values per cubic yard are sufficient to warrant dredging on a large scale.

Come in and See!
the finest USED CAR Values in town
HERE ARE A FEW
Special Showing

One 1928 Chevrolet Sedan, like new.
Price **$850**

1925 Ford Ton Truck
In good condition.
Price $275

1928 Chevrolet Truck
In first-class shape.
Price $750

If you have any idea how popular is the Outstanding Chevrolet . . you'll know why we can offer the finest used car values in town. People who never intended to let go their former cars couldn't resist the New Chevrolet. As a result we have taken in trade some of the smartest, snappiest cars we've ever had. Come in. See the cars. Look at the prices. Then tell us if you've ever seen such Used Car values before. But be sure to come early while the big values last.

British Admiralty Has Brought To Perfection An Electrically Controlled Torpedo

After several years of experimenting with a new type of electrically controlled torpedo, the British admiralty has brought to perfection a projectile which follows the target and carries sufficient explosive to blow the vessel to pieces when it scores a direct hit, according to reports heard today.

In a test on the admiralty range in Portsmouth harbor, one of the torpedoes got out of control and tore around the harbor at 40 knots. Fast admiralty vessels chased it but they could not overtake it and finally the torpedo landed at Weymouth beach.

Spectators were not allowed to approach within 100 yards of the mysterious projectile and photographs taken by several persons were confiscated for fear the secret of the torpedo's mechanism might be revealed.

The torpedo is not fired like an ordinary torpedo but is launched into the water. Thus the vessel that is carrying it is able to hide in a cove and destroy the enemy fleet with these electrically guided torpedoes without revealing the torpedo carrier's position by an explosion. Once launched, the torpedo is steered by a small wireless apparatus looking like two-tube amplifiers.

The first current applied starts the powerful driving mechanism at the back of the projectile. When it travels forward, a fine copper wire unwinds behind it apparently acting as a sort of guide. A second wave current controls the steering apparatus which gives remarkable control, enabling the torpedo to follow all the twists and turns of the target. A fin similar to that of an aeroplane's gives the operator the choice of launching the torpedo over the surface of the water at a tremendous speed or of submerging it several feet in order to make a hit below the water line.

The tests produced amazing results. Several old vessels were towed out to sea and a torpedo launched many miles away from them. In every case, and there were 14 tests of this kind, a direct hit was scored by the operator who was able to guide the torpedo to within a foot of the spot aimed at.

The torpedo contains a new and deadly explosive of such strength that several of the target ships were cut in half.

The Weymouth mishap occurred when the control instrument burst a tube and left the operator able to guide the torpedo in one direction only. Hence the projectile made ever widening circles until it was grounded.

The explosion of the torpedo head is caused by the contact of four detonators, two on the head and two on each side. The fuses explode immediately when any one of these come in contact with hard projects.

Strong For Daylight Saving

Twenty-Five Million In States Will Live Under It This Summer

The Merchants' Association of New York announced recently it had completed a survey showing that 25,000,000 persons in the United States will live under daylight saving time this summer.

While a few of the smaller cities and towns have discarded the practice since last survey was made two years ago, the association said the latest inquiry shows the movement on the whole is growing.

A bill authorizing daylight saving is now pending in California; Massachusetts has a statewide daylight saving law; the whole state of Rhode Island will be on daylight saving by virtue of numerous local ordinances, and virtually the entire state of New Jersey will observe the new time.

In New York State 186 cities and villages set clocks ahead, and 53 communities in Connecticut will again adopt the plan. Chicago and eight other cities in Illinois and six cities in Indiana are among other places to adopt the scheme.

No Night Driving In Europe

Almost Impossible For Motorist To Obtain Service After Dark

There is almost no night driving done in Europe and the motorist contemplating a trip will find a deserted world, according to the foreign Travel Division of the American Automobile Association.

The official touring body says:

"There is almost no night driving done in Europe. The driver who attempts after dark finds himself in a deserted world. Everything is closed up. Houses and shops are darkened. The only sign of life comes from occasional lights shining through window cracks or from under doors. Except in the larger towns it is impossible to purchase gas or oil or obtain service of any kind at night. When passing at night cars always dim their lights so as not to blind the oncoming driver. Mountain roads are treacherous at night. Many of the steepest grades will be graded to the farm and field of Western Canada.

Japan Buys Setting Eggs

Orientals Satisfied With Results From Canadian Supply

Ever since the World's Poultry Congress was held in Canada in 1927, the exports of fine poultry have been increasing. Not only breeding stock but hatching eggs have been going forward over long distances. Japan took considerable stock last year and it is reported by the Poultry Division of the Live Stock Branch of the Department of Agriculture at Ottawa, that the hatchings from eggs sent to Japan were well over fifty per cent. Already this year some three thousand hatching eggs have gone to that country. It is announced also by the Live Stock Commissioner that an order is being fulfilled by the British Columbia Record of Performance Breeders' Association for a shipment of eggs to a breeder in the Philippine Islands.

ONE-PIECE WRAP AROUND

It's one-piece! The smart printed silk crepe wrap around model with effective shirring and dirge at right side, so suitable for street and all occasions wear. Its extremely slender line makes it so suitable for average full figure. The shirring is repeated at shoulders. Long sleeves have turn down flared cuffs. A narrow belt crosses back and extends to each side of front. Style No. 469 can be had in sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust. In 36 inch size, 2¾ yards of 40-inch material with ⅝ yard of 35-inch contrasting, is sufficient. Plain silk crepe, satin, faille crepe, crepe Roma, wool crepe, printed cotton foulard and printed rajah silk are fashionable fabrics suitable. Pattern price 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

We suggest that when you send for this pattern, you enclose 10 cents additional for a copy of our Spring Fashion Magazine. It's just filled with delightful styles, including smart ensembles, and cute designs for the kiddies.

GIRL AVIATOR AND EXPLORER

Martinus Hays, girl aviator and explorer, who has left Detroit for Fort Churchill and hopes to eventually reach the Mackenzie River. Miss Hays is ambitious to become a popular writer and much of her aeroplane globe-trotting is in search of local color and atmosphere for her future writings. The photographs show Miss Hayes in trim flying costume.

A New Wheat Variety

R-49, Recently Evolved, Gives Promise For Rust-Resistant Qualities

A new wheat, known as R-49, may prove to be the long hoped for rust-resistant wheat. Canadian Government plant breeders have, for several years, been experimenting in an effort to evolve and develop a variety of wheat that will resist rust and at the same time be of high grading quality and give a satisfactory yield. Emmer, which is a rough, large, heavy yielding grain of the wheat family, which has seemed to be rust-resistant, has been crossed with the famous Marquis wheat and the progeny has been treated with Marquis resulting in a grain which is three-quarters Marquis stock. The new wheat has been carried on these experiments at the Manitoba Agricultural College, and from as many as 86 strains developed, R-49 seems so far to be the most promising, though there are a few others that are regarded with favour and are consequently under close observation. Flour tests of R-49 have been very encouraging; so, too, have the yields, but the tests have been made from small crops grown under glass. If it acquits itself well on the wide open spaces, R-49 may be on the way to the much-to-be-desired position of Parent Marquis. Meanwhile the most severe tests will be given to R-49, and it must come through them all with honours before it will be graduated to the farm and field of Western Canada.

Supplement Being Prepared

New Words Are Coined So Rapidly Oxford Dictionary Is Already Old

So fast is the present generation coining new words and unearthing old ones, that the Oxford English dictionary now published last year is to be supplemented with an extensive addition soon.

Already 30 pages are in type containing words dealing with the letter "A." This list begins with the word "aasvogel," and the last one is "aargyrose."

According to Oliver Onions, who is editing the supplement, it is an established custom to supply quotations of words collected last year. He has asked for contributions of quotations with exact dates, titles and reference containing the word, "agio," "aisle-de-camp," "alright," "amoral," "ashtray" and others.

Girl Best Cattle Raiser

Twelve-Year-Old Annie Turner Is Champion Of British Columbia

This year's champion cattle raiser in British Columbia is little Annie Turner, twelve-year-old daughter of James Turner, Cadboro Bay stock breeder. Her 14-months old Shorthorn steer, sired by Braidhill Marquis and weighing around 1,100 pounds, won the grand championship of all breeds at the Kamloops bull sale and fat stock show.

Her winning trophies for live stock is no novelty for Annie Turner. She won high honors last year and this year she repeated her triumph with cups and other trophies galore.

Must Be Perfect

The optical glass used in an astronomical telescope must be free from imperfections and internal strain. In the polishing operation only a few ten-thousandth parts of an inch of glass are removed. Errors of a millionth of an inch in the surface curve must be detected and remedied.

Mrs. Dull—The cake recipe Mrs. Smith gave me is too expensive to use. The eggs cost too much.

Maid—How many does it call for?

Mrs. Dull—Eighteen. the yolks of nine and the whites of nine.

Astronomy Professor: "Can you name a star with a tail?"

Ardent Student: "Sure, Rin-Tin-Tin."

Make Milling Test

Garnet Wheat Found To Be Inferior To Marquis For High Grade Flour

In color, volume of loaf and glutten-content, Garnet wheat is inferior to Marquis, though the two varieties show no appreciable differences in absorption and bread yield, according to the result of a test, completed at the Keewatin mill of the Lake of the Woods Milling Company.

"If a high quality of flour is to be a first consideration," states the report of the company's investigators, "we cannot recommend Garnet for our mills. The result of this test further confirms our previous convictions."

To stage the experiment, which gave results in accord with previous tests, a mix of 2,000 bushels of Garnet wheat was milled in comparison with Marquis on a commercial basis. "An excellent sample of Garnet was used in the test, weighing 65½ pounds per bushel and containing 12.5 per cent. protein; the Marquis sample weighed 62½ pounds per bushel and averagol 13.2 per cent. protein.

Regarding Reward wheat, the company's test states, that the variety is inferior to Marquis in gluten per cent. higher in protein than Marquis and equal to Marquis in all the best baking points. Hope was expressed in the report that economic success in producing Reward might in the near future enable it to replace all other varieties.

Canadian Ice Cream For South Americans

Shipment Goes Forward To Georgetown, British Guiana, By C.N. Steamship

The first shipment of ice cream, which is believed to be the first ever made to South America from any place in Canada, went forward recently from Truro, N.S., bound for Georgetown, British Guiana, by the R.N.S. "Lady Drake" of the Canadian National Steamships. The order, which was of substantial size, was received by the manufacturer entirely unsolicited, and the manager of the firm foresees great possibilities in this trade with the inauguration of the new service by the Canadian National Steamships.

Two years ago they made their first shipment of this delicacy outside of Canada to Newfoundland, and this has since developed into a regular trade. Convinced by their success in Newfoundland, the firm decided to extend the export field with the results as noted.

Fighting Dealers In Narcotics

Addicts In Egypt Spend $25,000,000 Annually On Drugs

The extent to which the drug traffic is ravaging Egypt may be gathered from a statement by Colonel Russell Pasha, English head of the narcotics bureau recently established.

He declares that the number of Egyptians who habitually take drugs is estimated at more than 500,000 in a population of 15,000,000 including Europeans and considers that $25,000,000 is spent annually on the purchase of narcotics.

The bureau is engaged in a stern fight against the dealers in narcotics. One member of the gang recently tracked down in Vienna is reported to have netted $80,000 during the last two years from the drug traffic.

Three Years Making Table

Ohio Man Used 1,557 Pieces Of Wood But No Nails

Three years of tireless effort have made Burton W. Blair, Marion, Ohio, the possessor of a library table that is considered a work of art.

Without the use of a single nail or screw, Burton has constructed a table that many antique collectors would like to own.

The top is constructed of 1,557 pieces of wood, 17 different kinds being used to give the desired color effect.

Attractive in its simplicity, the unique table contains but three designs, the Masonic square and compass, composed of 62 pieces of wood, and the American legion emblem.

Blair is a World War veteran. He began work on his table October 5, 1925.

B.C. Agriculture

Agricultural prospects in British Columbia are favorable. On the low-mainland small fruits came through the winter well. There is a slight increase in the acreage of fall field crops which have come through the winter satisfactorily.

Canada has no leisure class. Those who have no business to attend to are busy at bonspiels in the winter and at golf in the summer. Those out of work keep busy watching the skyscrapers arise.

British Youths Study Agriculture

An interesting group of British Public and Secondary School Students who have just arrived at Macdonald Agricultural College. These young men will pursue a two years' course of study at the college and during the summer months will work on farms where places have been provided for them. Recruited by the Department of Colonization and Development of the Canadian Pacific Railway the scheme under which these students have come to Canada now enters its fifth year of operation. On completion of their studies these new arrivals will engage in various branches of Canadian agriculture by which time they will have become accustomed to Canadian methods.

Canada Makes Great Strides In Past Few Years In Work Of Aerial Mapping

Care At Shearing Time Well Repaid

Clean Floor and Neat Rolling Of Fleece Are Essential

With wool providing a very important proportion of the total revenue from sheep and with this product sold on a graded basis as it is in Canada, it is important to exercise care at shearing time, point out officials of the Canadian Co-operative Wool Growers. Clean wool, free from chaff, burrs, dung locks, binder twine, and other foreign material and also from the short black or gray hairs found growing on the heads and legs, is worth decidedly more than wool not so carefully cared for. With the weather warming up those sheep men who are anxious to get the most of new wool on their animals before the fall fairs open are shearing now, although this work will not become general in the East for six weeks yet and in the West before the first of June.

Now-a-days sheep are seldom washed prior to shearing. Washing did not get rid of all the grease and dirt from the material and it had to be scoured when it reached the mills anyway, so today the work of washing or scouring is generally left to the mills, and the general practice is to sell the wool in the grease. There were many disadvantages to washing on the farm apparently, the particular being to get the wool into nice shape for shearing. Furthermore there is nothing to be gained especially in selling washed wool as against unwashed.

Shearing should be done in dry weather on a reasonably warm day, and by all means on a clean floor or piece of canvas. Before taking off the regular fleece all matted or heavily stained tag locks should be trimmed off. After shearing the fleece should be spread out with the cut side down, the sides folded in and rolled firmly from britch to neck so that the best parts of the fleece, which cover the shoulders and heart girth, show on the outside of the package.

Wool officials are opposed to tying with binder twine, pointing out that this, like the tufts of black or gray hairs, should be kept out and kept with the fleeces, will not take the dye when the wool is being processed, and therefore make it unfit for many uses. They advise using paper twine, as supplied by the Wool growers to all their shippers, or if this is not available, the use of a neckpiece, which is twisted into a rope and passed once around the fleece which is then tucked in. Standard wool sacks which hold from 15 to 25 fleeces are advocated for packing the wool in after it is shorn. Jute bags are suitable, clean bran sacks. Tight packing in these sacks is very essential as it means less shrinkage in weight, hence the wool in a dry place until sold.

Loggers Great Egg Eaters

Not Unusual For One To Eat Half Dozen For Breakfast

Poultry producers in British Columbia have been giving more attention than usual, of late, to the local market afforded by logging camps. Logging camps afford a profitable market for a number of small individual poultrymen. Loggers, as a whole, are great egg consumers. A lumberman has just completed a list of logger consumers, which is surprising, totalling 3,290 men. Loggers are served with eggs without stint and breakfast. It is not unusual for one logger to eat half a dozen eggs as a starter for the day.

If At First

The film producer was reading the part to the star.

"What you have to do is to seize the woman in your arms, get on top of a passing taxi, and jump from there to the fire-escape of a building," he was saying. "Then you must climb to the sixth floor, drag her to the parapet, and, bracing yourself against a chimney, hurl her into space. She catches a window-ledge in her fall, and—"

"Suppose I drop her?" asked the actor.

"Well, you'll have to pick her up and begin over again."

Aust Have Fire Brigade

Some anti-hills have their own fire brigades. A woman naturalist in France discovered this by placing a lighted taper on a hill. A battalion of ant firemen promptly appeared and extinguished it by squirting liquid formic acid from their jaws on the taper, while others tore at it. Many of the ants were killed, and one hero dragged another from danger.

Prince Albert National Park

Prince Albert National Park, in northern Saskatchewan, has an elevation of 1,800 feet above sea level and contains many lakes and streams which form the beginnings of canoe routes leading both to Hudson Bay and to the Arctic Ocean.

Canada is taking pictures of herself from the air at the rate of some 60,000 square miles a year. In other words, Canadian flyers are adding to the aerial maps of this country an area equal to two-thirds of Great Britain and Ireland every year, according to N. C. Stewart, Victoria surveyor, who has recently returned from Ottawa after studying aerial mapping and general developments along this line.

"These maps are not taken for any mere scenic record, although they would be well worth while for that alone," said Mr. Stewart. "The maps are used for tracing mineral deposits, oil and timber resources, locating transportation routes, range and soil and water resources. The aeroplane is giving Canada the best opportunity she has ever had of studying herself and finding out just how wealthy her resources really are."

Aerial mapping is a comparatively recent development in Canada, although in the last two or three years amazingly long strides have been made. In 1921, for instance, only 280 miles were mapped, while last year the area mapped from the air totalled 66,650 square miles. Last year the Royal Canadian Air Force made 4,000 photographs from the air under direction from the topographical survey department.

There are two methods of air mapping—the oblique and the vertical. The former method covers territory much faster than the latter, and is practicable in flat country but in British Columbia it will be necessary to use the vertical method.

While the accurate production of maps from aerial photography calls for a great deal of detailed land to co-operation with aerial work, the aerial pictures are an excellent means of taking quick survey of new territory, a frequent demand in these days of rapid mineral and lumber development, according to Mr. Stewart. He states that the aerial maps of Northern Ontario and Manitoba show how detail may be added in this way that would take years of ground work. On some of the Ontario sheets thousands of lakes have been mapped that never appeared on the records before the air pictures were made.

In the next ten years Canadian officials expect to have a thousand layers of Canadian territory, according to Mr. Stewart. One-quarter of that number have already been onted.

Canada Must Improve Barley

Professor Harrison Finds Markets In Europe Only Take Best Quality

Prof. T. J. Harrison, Manitoba Agricultural College, and Paul Bredt returned recently from Europe, where they have been making investigations on the barley requirements of the British and foreign trade. Professor Harrison is preparing a report on his trip, but in the meantime is prepared to say that Canada grows the world's worst barley. With plenty of room for improvement, Professor Harrison is making his plans for encouraging better quality. There is a market there for Canada's O.A.C.-21 in the distilling and malt extract trade, but not for brewing. With such quantities of excellent barley the European malsters have plenty of opportunity to skim the cream and it is only the best they want.

The Explanation

On this trip the crack express had been far from living up to its reputation. First it would go forward fifty yards or so, then back, then stand still, puffing industriously, and then begin the same thing all over again. At last one of the travellers lost his patience and summoned the porter.

"What's the matter with this train?" he exploded. "Backing up and jerking forward in this awful way."

"It's quite all right, sir," the porter assured him in that soothing way that guards have. "It's only the engineer is teaching his wife to drive."

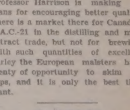
Cadmium Produced In Canada

Cadmium was produced in Canada for the first time in 1928. It is used for plating purposes, in colour making, medicine, and dyeing.

Father: "It's late; hasn't your young man closed the door yet?"

Daughter: "Yes Daddy."

Father: "From the outside?"



"The woman was wonderful. In all my life I never have met a woman with such intelligence."

"Why didn't you marry her?"

"She wouldn't have me!"—Karikaturen, Oslo.

Cuticura Soap

WORLD-FAMOUS FOR DAILY TOILET USE

The every-day use of Cuticura Soap, assisted by occasional applications of Cuticura Ointment, when required, is your best insurance against skin troubles. They not only cleanse and purify, but also enhance and preserve the natural qualities of the skin and hair.

Soap 25c. Ointment 25c. and 50c. Talcum 25c. Sold everywhere. Sample each free.

J. T. Wall Company, Ltd., Montreal.

WORLD HAPPENINGS BRIEFLY TOLD

Lord Revelstoke, who died recently in Paris, where he was attending the meeting of the reparations conference, left half a million dollars to King Edward's Hospital fund for London.

The estimates tabled in the Newfoundland legislature provide for a total expenditure for 1929-30 of $16,541,000, and $16,239,000 for 1928-29. The total funded debt of the colony is $81,424,149.

The British sloop "Cyclamen" has left Aden for Berbera, Somaliland, in Abadai, Persia, where mobs had got beyond control of police. Persian troops have been called to restore order.

Profound secrecy surrounds the building programme of the French Air Ministry. Everything around the Ministry building is in a whirl and aviation factories are working day and night to carry out the programme.

A country-wide search for Miss Barbara Pitcher, missing McGill University student who disappeared in Montreal, March 21, was brought to an end with the finding of the young woman's body in Back River, near a convent at Sault au Recollet.

To increase the outlet for table stocks of potatoes, the New Brunswick Department of Agriculture is encouraging the erection and operation of starch plants in the potato raising sections as a means of taking care of the small and otherwise unmarketable potatoes from the crop of succeeding years.

The Nationalist government state council announced that henceforth decapitation as a method of execution in China would be prohibited. Decapitation had been discarded by previous regimes but it was still used by the police and military authorities for executing bandits and robbers. Its complete abolition has now been ordered.

A Universal Clock

German Invention Would Have One Time Piece For World

A German inventor has proposed that one special clock be prepared and erected to keep time for the world. From some central observatory its ticks would be broadcast by wireless to the whole civilized world, giving a single actual time. Clocks throughout the world would be brought in agreement as often as one-hundred-thousandth of a second, and the inventor's plans include the use of television devices to synchronize the earth's clocks with the master-timepiece. At present each country sets its clocks from its own astronomical observatory by wireless and telegraph, and it is pointed out that between clocks of foreign countries there is often a discrepancy of a fifth of a second.

Alberta Pool Elevators

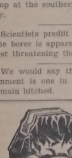
The Alberta Wheat Pool made a definite start the other day in extending its country elevator system, when it was officially announced that 18 of these elevators had been contracted for and 12 others bought over from different interests.

Okanagan Fruit Prospects

Despite hard winter weather there is very little injury to the fruit trees of the Okanagan Valley, and indications are for a fair setting of all fruit with the prospects for the apple crop at the southern end of the valley.

Scientists predict a tseless race. The borer is apparently not the only pest threatening the corn crop.

We would say that a stable government is one in which the people remain hitched.



What most people call indigestion is usually excess acid in the stomach. The food has soured. The instant remedy is an alkali which neutralizes acids. But don't use crude helps. Use what your doctor would advise.

The best help is Phillips' Milk of Magnesia. For the 50 years since its invention it has remained standard with physicians. You will find nothing else so quick in its effect, so harmless, so efficient.

One tasteless spoonful in water neutralizes many times its volume in acid. The results are immediate, with no bad after-effects. Once you learn this fact, you will never deal with excess acid in the crude ways. Learn—now—why this method is supreme.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acidity. Every bottle contains full directions—any druggist.

The "Land Of Millionaires"

More In Great Britain Than In United States

Great Britain, rather than the United States, may best qualify for the title of "Land of Millionaires," according to the report of commissioners of inland revenues.

There are, the report revealed, between 500 and 600 millionaires in Great Britain. These men are millionaires in the terms of pounds sterling which means they are worth five times as much as the millionaire who reckons his wealth in dollars.

Millionaires, from British tax officials' point of view are persons who have an income of more than 50,000 pounds ($250,000) a year. Assuming that the average yield of capital is five per cent., each of these would be worth at least $5,000,000.

The report showed that there were 299 persons with incomes between $250,000 and $375,000. There also were 97 persons with incomes between $375,000 and $500,000, and 147 with incomes exceeding $500,000 a year.

There were only 19 millionaires in Great Britain in 1906. The number increased steadily after that year until there were 562 in 1927, after the boot-war trade boom.

The report showed a reduction in national income, which was estimated (gross) at $14,520,000,— the lowest since 1921. The net product was $1,140,000,000, an average of 23.58d. on each pound of actual income, the lowest for the last ten years.

Australia Is Severe On Drunken Drivers

Makes Penalties So Strict Motorist Fears To Incur Them

How drunken drivers are handled in a country where liquor may be obtained by any one at any time is told by Charles W. Lloyd, of Adelaide, Australia, who is in North America studying highway and traffic conditions. He stated that although Australia has no prohibition statute, it has availed itself of motor driver problem by making penalties so strict that motorists fear to incur them.

A motorist is liable to be hanged if he kills a person while under the influence of liquor. Liability to death if the driver is convicted only of manslaughter, in such cases he is subject to 8 to 10 years' imprisonment.

Knocking another person unconscious in traffic accidents is punishable by seven years' imprisonment if the driver is intoxicated, while the lowest penalty for drunken driving is a fine of $125, six months' imprisonment, and loss of license.

Everything Too Long

Nearly every magazine article, nearly every sermon, nearly every lecture, nearly every speech, is too long. The ordinary listener in a church, or lecture hall, or at a public dinner cannot escape. But the reader of a magazine is free; he begins a story that sounds like an interesting one, and after he has read three pages, he looks to see how long it is; if he finds it is going to continue for fifteen more pages he reads something else.

Place To Carry Mail

Permission has been granted to the Western Canada Airways by the Post Office Department to carry mail semi-weekly on their trips from Prince Albert to Rottentone Lake, by Montreal and Lac La Ronge. The service will be established as soon as the lakes have cleared of ice and the company is able to resume the flights.

When intensely angry and searching for a fitting word to express yourself, say "Roosevelt," which, we are reliably informed, is the biggest damn known.

Search For the Brightest Boy

Thos. Edison To Grant Scholarship To Candidate Passing Test

Thomas A. Edison, grown grey in achievement and fame, has started out to find a boy to whom he may pass on some day the torch of his genius. He started a search for the brightest boy in the United States. When he finds him, he is going to send him to college first of all.

A scholarship, taking care of all tuition fees for four years at whatever technical school the winner wishes to enter, will be awarded the high school or preparatory school boy who most intelligently answers a questionnaire to be made up by Mr. Edison.

The winner will be one of 49 to be picked, one from each state and one from the District of Columbia.

Mr. Edison will pay the expenses of all 49 boys from their homes to his laboratory at Orange, N.J., about August 1. There he will put to them his questionnaire.

Plans Trip To Peace River

Premier Brownlee Will Investigate General Conditions In North Country

Premier Brownlee of Alberta, is planning a visit to the Peace River country during the coming summer. He expects to make the trip toward the last of August and hopes to be accompanied by President Wallace, of the University. If the Premier's present plans work out, the route for this trip will be down Peace River to Vermilion, and then to Fitzgerald, Fort Smith, Chipperyan and McMurray. The purpose will be to look into the conditions and possibilities in a colonization way in the Peace River district in particular, and into the general conditions and problems of the north country as a whole. Dr. Wallace will also have an eye to the mineral resources of the north.

472

DISTINCTIVE—SLENDER

A checked silk crepe whose lines are utterly smart and slender, needs no further adornment. The all-around blousing of fashion shows a smart contrast to fitted hipline of skirt with diagonal treatment noted in pleated inset. The scalloped shawl collar of surplice bodice lengthens the silhouette. Style No. 472 can be had in sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust. In the 20-inch size, 3¾ yards of 40-inch material is sufficient. Checked featherweight tweed with collar and cuffs cut on the bias and piped in plain coloured grosgrain ribbon is sporting and serviceable. Georgette crepe, printed cotton foulard, printed rajah silk, crepe marocain, sangora wool jersey, and cantonfaille crepe offer chic suggestions, made at small expenditure. Pattern price 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

We suggest that when you send for this pattern, you enclose 10 cents additional for a copy of our Spring Fashion Magazine. It's just filled with delightful styles, including smart ensembles, and cute designs for the kiddies.

Fanatics Besiege Pope

Thousands Of Them Gather In Square Before Vatican

Pope Pius XI. has been besieged by thousands of fanatics who gathered in the square before the Vatican to demand that he bless them and their rosaries.

The pontiff, who is 72 years old, has been ill for some time and has been unable to receive the crowds which have been coming to Rome for the Holy Year celebrations.

Yesterday, however, he appeared at a window of the Vatican and blessed the throng. Many of the people had come from distant parts of Italy and had been waiting for days in the hope of seeing the pope.

Canadian Legion

Dominion Convention To Be Held In Regina In November Of This Year

The Dominion Convention of the Canadian Legion B.E.S.L., will be held in Regina on November 25th 1929.

To those ex-service men who are not members of the Legion, the present is an opportune time to become identified with an organization that has done much to promote the welfare of returned men, their widows and dependents.

The work of the Legion is not diminishing as the years go by, but rather is growing. The membership likewise is increasing, and particularly so in Saskatchewan since the Provincial Convention, but in the province there are still a number of men who are eligible for, and who have not as yet identified themselves with the organization, possibly due to lack of opportunity to do so.

With the increase of branches throughout the province, there is now local representation in practically every district, and the provincial secretary, Canadian Legion, Regina, will be pleased to advise anyone, on request, of the nearest local branch.

Unity among returned men was accomplished when the Canadian Legion came into being and there is all that remains is to complete the membership and make the organization even more representative than it is today.

On its record of achievement alone, the Legion deserves the support of all ex-service men. It is hoped that the next few months will see every eligible man in Saskatchewan enrolled. The matter is nominal, but the presence of every returned man in the ranks of the Legion will be of the utmost value in furthering the aims and objects of the organization, and in promoting that comradeship which is one of its biggest assets.

Bay Route Cannot Operate This Year

Impossible To Have Things In Readiness Early Enough

While the Hudson Bay Railway may be ready for traffic early this autumn, it is altogether unlikely that harbor developments at Churchill or on the side of navigation which must be installed in Hudson Straits will be sufficiently advanced to permit of commercial navigation of the new northern route.

In order to open the route this year it would be necessary to have everything in readiness by October, as the season of navigation cannot be relied upon to extend past December, this is not considered to be possible, but the route probably will be in full operation in the summer of 1930.

An English physician claims that crying is good for one's complexion —provided, of course that one's complexion is one's complexion.

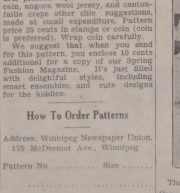
CANADIAN AIR MAIL PLANE ESTABLISHES WORLD'S RECORD



The entire world recognizes that Canada, in proportion to her population, is making greater practical use of aircraft than any other country and the "work" records of Canadian airplanes are regarded as even more important contributions to the advancement of aviation than the endurance and other stunt achievements of other countries.

Canada's latest and most impressive practical record in air is in speedy delivery of air mail and Capt. S. Bonfiurnzi, pilot for Canadian Airways (subsidiary of International Airways of Canada, Limited), as a result of a record flight between Toronto and Montreal, now holds the world's air mail speed record.

Capt. Bonduran, flying a Fairchild "71" powered by a Pratt & Whitney Wasp engine, on March 21st, covered the 340 miles from Toronto to Montreal in just one hour and forty-four minutes, and this has now been established as the world's fastest air mail flight.

Remarkable as this time is, Capt. Bondurant would have bettered it, but for fog encountered a little over 100 miles from Montreal. Up to this point he has flown 215 miles in just 60 minutes, maintaining a speed of over 215 miles a minute.

Throughout the record-breaking flight Capt. Bondurant reported perfect performance from his plane which was fueled with Imperial Aeroplane Spirits and lubricated with Imperial Marcelube Motor Oil products which have become the almost universal preference of Canadian aircraft operators who process them for 90 out of every 100 miles flown in Canada.

SUNDAY SCHOOL LESSON

MAY 19

JEREMIAH CALLS TO OBEDIENCE

Golden Text: "Hearken unto My voice, and I will be your God, and ye shall be My people."—Jeremiah 7. 23.

Lesson: Jeremiah 7.1-26.

Devotional Reading: Psalm 96. 7-13.

Explanations and Comments

Outward Ritual Is Not Religion, verses 1-4.—Jeremiah felt impelled to stand at the gate of the temple and warn the people. To all who entered in at these gates to worship in the temple, Jeremiah cried: "Thus saith Jehovah of hosts, the God of Israel, amend your ways and your doings (a favorite expression with Jeremiah), and I will cause you to dwell in this place, you need not fear being carried off into exile. Trust not in the lying words of false prophets who declare unto you that God will never permit this holy temple to be destroyed." The threefold repetition of the words "the temple of Jehovah" suggests the energy of attention that belongs only to Eastern fanatics, Desi Stanley observes. Recall the repeated cries of the fanatics in the theatre at Ephesus, "Great is Diana of the Ephesians" (Acts 19.)

"Is it not thus that the children of godly parents presume on the results of hereditary piety? Is it not thus that evil-living men will risk the consequences of sin, because they are prepared to make liberal gifts to religion? The drink-seller, the opium-smuggler, the slanderer, have all, in one form or another, administered sedatives to conscience, saying, 'The temple of the Lord! The temple of the Lord!' "—F. B. Meyer.

Amend Your Ways By Obedience To The Covenant Of Old, verses 5-7.—The conditions of security of the people in the land of their fathers would depend upon their reforming and practicing the social virtues. Jeremiah declared,—the security of justice between a man and his neighbor, and the freeing from oppression of the stranger, the fatherless and the widow, and the avoidance of the shedding of innocent blood—and also upon the avoidance of the worship of false gods. The stranger was the sojourner from away, the alien residents temporarily in Judah. He and the fatherless with the widow had no vote in the administration of affairs and could be easily oppressed.

"The latter has power over the clay to make and to change as he pleases, so is the nation in the hands of God to do with as seems best to Him. It is not for us to try to mould the national life and purpose without God and His Son Jesus Christ, into whose hands the affairs of the world have been given: it is for us to make sure that of all that our nation is right with God and that we have the spirit of submission and obedience to him. Then the vessel will come out a vessel of honor, for the hands of God will be moulding the clay on the wheel."—The Youth's Companion.

Recipes For This Week

(By Betty Barclay)

FRUIT OMELET

1 egg.
Few gratings orange rind.
1 teaspoon orange juice.
Few grains salt.
1 orange.
2 teaspoons butter.
2 teaspoons powdered sugar.

Beat the egg slightly, adding the orange rind and juice and salt. Peel the orange, removing all white membrane, and cut into very thin slices. Sprinkle with one teaspoon of the powdered sugar. Melt the butter in hot individual omelet pan or frying pan. Pour in the egg mixture and cook over a low heat, shaking the pan and pricking the mixture with a fork until all the mixture is cooked. Roll or fold and turn out on to serving dish. Sprinkle with remaining sugar and surround with slices of orange.

A BALANCED MEAT DISH

Shred one pound of lamb, beef or pork and brown in its own fat in a frying pan. Add one cup of chopped celery and celery tops, one tablespoon minced onion and one tablespoon salt. Cover and cook about ten minutes. Add two tablespoons flour and two tablespoons butter mixed together and two cups canned strained tomato juice. Stir until the mixture is thick and bubbling, then serve.

Saskatchewan Hemp

Feasibility Of Hemp Growing Has Been Demonstrated

With the object of promoting hemp growing in the district, the Rosthern Board of Trade has instructed its secretary to purchase and distribute quantities of hemp seed. The feasibility of hemp growing as an industry has been demonstrated by seven farmers in the area, who have all had plots of four acres under cultivation. Although the seed was not sown until June last year, a month late, the hemp grew 12 feet in height. The Provincial Government is assisting in building up the industry. The nearest factory is at Pasqua La Prairie, Manitoba.

New Type Of Insurance

Love insurance is the latest in Paris. Protection against the risk of divorce is offered by a local company. Husbands and wives may take out a joint policy covering both against a change of affection, the amount paid in the event of a decree nisi varying with the premium paid.

Assisting the Indians

Canada Has Made Them Self-Supporting and Independent

For those who may be unaware of the success which is attending the efforts of the Federal Government, through its Department of Indian Affairs, to carry the Indians of the western provinces to a position of self-support and independence, it is of interest to learn, from a recently presented report, that the Indians in Manitoba, Saskatchewan and Alberta now have under cultivation 105,000 acres of land, having increased their holdings by the past summer by breaking 6,000 acres of new land and summer-fallowing 33,000 acres. The acreage for each of this large acreage is sown to grain. Gardening is being more generally practised and many of the reserves boast some fine plots of vegetables.

The cattle herds of the prairie Indians are among the best in Western Canada, due to the fact that unusual care has been taken by officers of the department in the selection of the sires, which in most cases are paid for from the Indians' own money. The herds now number 22,500 head, which includes an increase this year of approximately 2,000 calves. During 1928 the Indians sold beef cattle to the value of approximately $184,600, and in addition they provided beef for their own requirements valued at $40,000.

It has only been in recent years that the Indians have shown a lively interest in their cattle, but successes in open competitions and the good returns from their herds have resulted in increasing the attention given to this phase of agriculture. In Northern Alberta and in Saskatchewan and Manitoba the cattle are stabled or put in shed shelters and fed hay during the winter months, which means that a large quantity of hay and green feed must be cut each summer. During the past year 70,000 tons of feed were cut and stacked for use during the winter season.

Good, heavy horses are rapidly replacing the pony type among the Indians of the West. Nearly all of the farming Indians own fine work horses, of which there are about 5,000 head, in addition to prairie reserves. There are about 15,000 of the pony type of horse. Horses to the value of over $10,000 were sold during the various months of the season of 1928. More interest is also being shown in the raising of poultry and pigs.

The situation among the Indians on reserves in the three Prairie Provinces is most gratifying, and the efforts of the Federal officials in charge of Indian Affairs are reflected in the general advancement. Increasing interest is being shown in every phase of agriculture, due in large measure to the number of young Indians graduating from the various schools who are taking up farming.

B.C. Egg Pool

The B.C. Egg Pool has opened its Vancouver and New Westminster receiving stations with about 900 contracts obtained. The opening of the Abbotsford station, in the Fraser Valley, and the Courtney station on Vancouver Island will follow.

CHAPTER XIX—Continued.

Connie had rehearsed this moment a thousand times. She stood quietly on the steps for a moment, then slipped gracefully to the platform. Connie herself could not have imagined how changed she was. From coiffure to dainty French heels she was dressed as if fresh from the hands of an expert Parisian modiste. The dazzling wax she that she positively took Donald's breath away. It seemed to him that she had grown like a magic rose, all at once from a tiny bud to a full blossom. No fault could be found with the perfect oval of her face, or with the delicate white rose skin, from which every trace of tan had gone. The long lashes that fringed her big blue eyes had turned a shade darker than the curling waves of her abundant golden hair.

Andy, whose small form had been hidden in the rear, stood bashfully forward, fumbling the wide hat held in his hand. "Eh!o, Connie," he blurted; his lips parted in a wide smile of welcome.

Instantly Connie forgot her assumed dignity and became her warm, impulsive little self. With a glad cry she flung her arms about Andy's neck and kissed him.

"Strike me pink!" breathed Andy as his hand stole up to touch the spot where Connie's lips had brushed his cheek.

Connie turned to face the lake. "Oh, Dad!" she cried in ecstasy, "isn't it good to be back here again?" She stretched her arms toward the ice-clad peaks. A gentle breeze swept down the wooded slope to fan her face as though in welcome. The blood surged beneath her smooth white skin and went singing through every vein. "Ah!" she sighed happily, as she inhaled a deep breath of air laden with the odour of pine from the hills she loved. Donald, gazing at her hungrily, saw tears brimming under her long lashes.

From the far end of the train a tall, grey-haired man assisted a stout, over-dressed woman to the ground, and then walked towards the station. As they stepped to the platform the woman's eyes rested on Donald, who stood with his hand before. Instantly she became rooted to the spot, eyes wide, one hand fluttering toward her heart. With the supreme, wondrous mother-love shining in her eyes, she held out her arms.

"Donald!" she cried passionately. "Donald!"

Donald whirled at the sound of the loved voice calling his name. His head throbbed wildly, his throats felt constricted and his face paled under stress of strong emotion.

"Mother!"

His arms were around his mother, yearning, tender, hungry, after these long months of separation. Her face upturned to his was white and drawn, but her eyes shone with hallowed joy. He felt his hand gripped in his father's strong fingers, and Connie was smiling with tears. John McLean patted his boy's dark head with a shaking hand.

"Donnie! My boy, Donnie!"

His name sounded sweet; was oblivious to all save the great happiness of meeting his parents. His mother's embrace almost unmanned him, and he found difficulty that he kept back the sobs that tightened his throat.

He led his parents to the other end of the platform and introduced them to his friends.

Robert Rennie's comments were simply gasps and a reiterated, "Well! Well!"

Andy offered his usual contribution. "Strike me pink!" he said.

Connie's eyes were filled with soft eagerness as she greeted Donald's mother. The glow in Donald's face as he turned to Connie was poignantly significant of his deep love for her. But Connie, to his consternation and dismay, met his ardent glances with a look of cold indifference.

Since Connie's arrival Janet's features held a look of disquietude, but on acknowledging the introduction to Donald's parents with a radiant smile.

A moment later, Connie, with slender head high, was running down the railroad track.

"Going after her horse," smiled Wainwright in answer to Donald's question.

"Will you have dinner with us?" invited Donald.

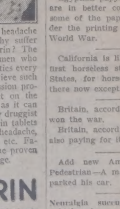
"I'll be glad to see you," responded Wainwright. "We will sleep in the car tonight," he continued, "but Constance insists that we return to spend the day home as soon as possible. She has been busy drawing plans for a cabin the intends building on the bluff.

Donald's features were as mild but thorough laxative which regulate the bowels and sweeten the stomach. They drive out constipation and bad digestion, break up colds and simple fevers and check the cutting of teeth easy. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

New Creamery Building

Election of a new creamery building on 11th Avenue as headquarters for the Calgary District. Producers' Association and the southern section of the Alberta Dairy Pool will be begun at once, according to an announcement following a meeting of representatives of both organizations.

Great works are performed not by strength, but by perseverance.



NEVER wait to see if a headache will "wear off." Why suffer when there's always Aspirin? The millions of men and women who use it in increasing quantities every year prove that it does relieve such pain. The medical profession pronounces it without effect on the heart, so use it as often as it can spare you any pain. Every druggist always has genuine Aspirin tablets for the prompt relief of a headache, colds, neuralgia, lumbago, etc. Familiarize yourself with the proven directions in every package.

FIRESTONE TIRE & RUBBER CO. OF CANADA, LIMITED

HAMILTON - ONTARIO

It was Vancouver's morning paper with a full-page devoted to the visit of the Eastern lumbermen. There were several photographs of the Sunnyside Mill and one of Donald. The paper spoke of him as "the able young engineer whose modern ideas and energy had given to British Columbia a logging plant and mill that were a credit to the Province."

Donald saw the proud light in his father's eyes, and his heart was filled with a great peace.

The next day carpenters and material arrived for the construction of Wainwright's new home. That afternoon Connie, clad in fashionable riding habit, came to the mill offices with her foreman to place an order for lumber. Pegasus in silver-mounted bridle and English saddle was proudly restive. With neck arched he curvetted and rocked while Connie sat on his back with that complete lack of self-consciousness that is the heritage of a born horse woman. Before leaving she rode up the hill among the toiling workers, her irresistible smile bringing at unnerving grin from the "rackabrick," who doffed their hats and shouted a joyous greeting.

All day pack-horses and men struggled up the hill, staggering under the weight of building material. But although Donald strained his eyes for a glimpse of the golden-haired rider, he saw her no more that day.

(To Be Continued.)

NO MEDICINE LIKE BABY'S OWN TABLETS

Once a Mother Has Used Them She Will Use Nothing Else

To once use Baby's Own Tablets is to use them continually—that is as long as there are young children in the home. That is the testimony given us by mothers from all parts of Canada. They all say that they know of nothing to equal the Tablets, that they find them safe and efficient and at the same time pleasant to take.

Mrs. John Hollinworth, Maidstone, Ont., writes:—"I have three children, the eldest fourteen and the youngest nine months old. I have always used Baby's Own Tablets for them and have found no other medicine to equal the Tablets as a relief for the many ailments of childhood."

Baby's Own Tablets are a mild but thorough laxative which regulate the bowels and sweeten the stomach. They drive out constipation and indigestion, break up colds and simple fevers and ease the cutting of teeth. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

The Mania For Speed

Giving Way To It Is Creating Havoc In Many Ways

There must be no limit to speed. Everything—everything—must give way to it. That is the cry. Efficiency, if possible, but speed in any case, writes S. H. T. in Woman's Magazine. We are in a stage of transition—a period of re-adaptations of ideas and reactions. At present the panic for rapidity is creating havoc in a thousand different ways. It will never find us—this generation—capable of fitting quite into the place. Come of us, with, perhaps, a more agile mind, and a quicker, adjusting spirit, are better able than others to find our way in this mad rush across life's happenings in the world.

Some day, perhaps, we, of the generations to come, may have come to possess such rapidity moving minds, as to produce at the same time the highest form of efficiency.

But what does it, or rather what will it lead to?

The danger is, and a fearsome danger it is, that we shall draw gradually, and even rapidly, away from, the spiritual mind. And it is a fact, however much we may ignore it.

We are, first and always, spiritual beings. The material in us must go, the spiritual must, or rather may, remain if we wish it. The great and wonderful gift we blessed people have, is to continue after the plane of life. But surely we cannot exist or continue if we have no interest in the spiritual life today, or that of the future.

Little Helps For This Week

"Obey My voice, and I will be your God, and ye shall be My people." —Jeremiah vii. 23.

Three roots bear up Dominion; Three virtues make her one; These twain are strong, but stronger Than all is Obedience. It is the great tap-root that still,

In the rock of Duty, is not stirred,

Though heaven-loosed tempests spend their utmost skill.

—James Russell Lowell.

Tenacity of will is the root of all courage; but courage can only rise into true manliness when the will is surrendered; and the more absolute the surrender of the will, the more perfect will be the temper of our courage and the strength of our manliness. "Strong Son of God," cries the poet, "Immortal Love, our wills are ours to make them Thine," and that strong Son of God, to whom this prayer was offered one day, and in all days, has left us the secret of His strength in the words, "I am come to do the will of my Father and your Father."—Thomas Hughes.

His Itemized Bill

Among Other Things Church Painter Cleaned Red Sea

A bill submitted by a church interpreter for the Methodists of Nyad (Sweden) parish church, nearly one hundred years ago, reads as follows: Altered the Ten Commandments and painted the whole; repainted resting Pilatus, put new furs on his bonnet; put new wings on the Angel Gabriel. Painted Jerusalem; made over the robe of hell and made the devil's face more awful. Cleansed the Red Sea, which was really very dirty.

Useful In Camp

Useful In Camp.—Explorers, surveyors, prospectors and hunters will find Dr. Thomas' Eclectric Oil very useful in camp. When the feet and legs are wearied and cold it is well to rub them freely with the Oil and the result will be the prevention of pains in the muscles, and should a cut, or contusion, or sprain be sustained, nothing could be better as a dressing or lotion.

A Record Whale Catch

Oil Cargo Valued At $3,500,000 Brought From Ross Sea

With $3,500,000 worth of whale oil, said to be the largest cargo of its kind ever brought to New York, the C. A. Larsen arrived at Staten Island from a six-month trip to the Ross Sea in the Antarctic. There were 75,000 barrels of whale oil aboard.

Whales were so plentiful, said Capt. J. A. Nelson, the skipper, that some days fifteen were captured, some of them 110 feet long. Such a catch yielded more than 1,000 barrels of oil.

While in the Ross Sea the C. A. Larsen was within 200 miles of Commander Richard E. Byrd and his expedition and communicated with them daily by radio.

Egyptian papyri 2,000 years old are in better condition today than some of the paper which went under the printing presses during the World War.

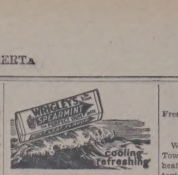
California is likely to become the first horseless state in the United States, for horses are rarely used there now except in isolated regions.

Britain, according to historians, won the war.

Britain, according to financiers, is also paying for it.

Add new American Dictionary: Pedestrian—a man who has just parked his car.

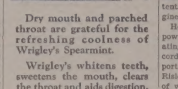
Neuralgia succumbs to Minard's Liniment.



Dry mouth and parched throat are grateful for the refreshing coolness of Wrigley's Spearmint.

Wrigley's whitens teeth, sweetens the mouth, clears the throat and aids digestion, while the act of chewing calms and soothes the nerves.

WRIGLEY'S after every meal



Rents Home By Wireless

Member Of Byrd's Party Closes Deal In New York

Willard Vander Veer, one of the motion picture operators with Commander Byrd's South Pole expedition, closed a lease for a Westchester apartment by radio from a point somewhere near the southern extremity of the world. The lease covers a suite in the Dorset, Bronxville Knolls, which had been selected by Mrs. Vander Veer.

Several days ago she sent by radio a description of the apartment, the rent asked and other particulars to her husband in the great expanse of ice near the South Pole, never really expecting that it would reach him. She was surprised, therefore, to receive a message at her home, 431 Homestead Avenue, Mount Vernon, from her husband to close the deal.

Nation-Wide Fame. — There is scarcely a corner of this great Dominion where the merits of Dr. Thomas' Eclectric Oil have not been tried and proved. It is one of the world's most efficient remedies for sore throat, lame back and many other ailments arising from inflammation. Rubbed on the skin its healing power is readily absorbed, and it can also be taken internally.

Condensed Information

For terse dialogue the following wants some beating:

Visitor (referring to some children standing by)—"Whose kiddies are they?"

Oldest Inhabitant—"Nibours" . . . Widow married widower. Them's two's hin's. Them two's her's. That'ns their'ns.

A Foremost Fur Producer

Canada is one of the foremost fur producers of the world. Raw furs are the chief commercial product of the wild life of the northern half of the continent and as such represent the only economic return from large areas in the Dominion.

Minard's Liniment relieves pain.

It's the running expenses that take a fellow's breath.

Heating By Radio

French Scientist Says Wireless Waves Can Be Used To Warm Homes

Wireless beams from the Eiffel Tower may be employed to furnish heat for the residents of Paris, if tentative plans drawn by French engineers are put into effect.

Heating plants deriving their power from radio waves are operating successfully in Germany, according to Jacques Risler whose report forms the basis of these plans. Risler said that while the question of wireless heating houses is still in the experimental stage, the feasibility of it has been definitely established.

Explaining how the wireless heating plant would operate, Risler said: "In the laboratory two posts were set up about 30 feet apart. The sending post sent out from 400 to 500 volt current waves of two to three meters in length. All that is to be done is to interpose on the receiving post circuit a filament in vacuo, and it is raised to an incandescent state and gives out quite appreciable heat. There is therefore no theoretical difficulty in installing in a house a series of receiving posts which would in reality be just so many electric radiators. This system could be extended ultimately to an entire district or to a whole city, which would derive its heat from one central broadcasting station.

A QUICK WAY TO END BABY'S UPSET SPELLS

"Like other young mothers, I worried every time Baby Ruth," says S. Syracuse, N.Y. woman. "Several times when she was upset or constipated, I tried castor oil but she couldn't retain it. Our doctor told me to try Fletcher's Castoria. Since it is harmless and babies like it. That ended my worries and I've used it since for all my children." Castoria never fails in delight and that is the reason for its tremendous sale and popularity. Like all good things, it's imitated, but genuine Castoria—the purely vegetable product — always bears the Fletcher signature.

Excelled In Sports

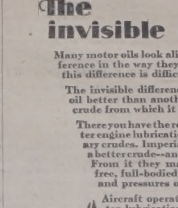
But Boy Who Wanted To Enter College Could Not Spell

Texas College relates the one about the lad who wanted to enter a college. His intellectual attainments were known to be slight, but the powers in charge of the entrance exams were anxious to pass him, for he was a magnificent caravan. In two's hick's Theu two's her's. That'ns their'ns.

"Just put down something," pleaded his tutor. "Write down anything you can and we'll get you through somehow." He left his pupil to it. The lad stared at the virgin paper before him for two hours. Then he put down the one word "dam."

The tutor returned and in more sorrow than anger despairingly declared: "I'm sorry we can't pass you. You've spelled it wrong!"

Sunlight is about 618,000 times as bright as the light of the full moon.



The invisible difference

Many motor oils look alike, but there is a vast difference in the way they perform. Unfortunately this difference is difficult to detect.

The invisible difference which makes one motor oil better than another must be inherent in the crude from which it is made.

There you have the reason why Marvelube gives better engine lubrication than oils refined from ordinary crudes. Imperial Oil searched the world over for a better crude—and in South America they found it.

From it they make Marvelube—a pure, carbon-free, full-bodied oil that resists the extreme heats and pressures of modern engine operation.

Aircraft operators prefer Marvelube because better lubrication means greater safety and longer intervals between overhauls. Motorists prefer Marvelube because it is the ideal oil for modern motors. It ensures greater power, greater flexibility and greater economy.

There is a grade of Marvelube refined to meet exactly the specifications of your car. Consult the Marvelube Chart at Imperial Oil service stations and dealers.

Marvelube

a better motor oil made from Peruvian crude

Largest Thermometer

Seventy Feet Long Has Been Erected In Museum Tower At Munich

The largest thermometer in the world was recently erected in the tower of the Deutsche Museum at Munich. It is 22 metres—about 70 ft.—long, and shows not merely the temperature of the moment, but the maximum and minimum of the previous day. It is regulated by another instrument of normal size, connected by electrical apparatus. Not until a thermometer becomes more than about 60 ft. long do you realize how exciting it can be. Blow hot, blow cold, the temperature of the breeze changes from minute to minute. The mercury ebbs and flows like a ripple on the seashore, and the spectator finds difficulty in tearing himself away from contemplation of the restlessness of the atmosphere.

Brain Capacity

Man's brain attains its maximum capacity at thirty, but a monkey's brain reaches its greatest weight between the ages of two and three, and after that remains stationary.

Great and good thoughts are true wealth.

HEADACHE RELIEVED . . . QUICKLY

MOTHERS' DAY

Mothers' Day, which fell this year on May 12th, was observed here last Sunday, as well as throughout Canada and the United States, the object of the day being to recall memories of the mothers who have passed to the beyond, and to pay special tributes of affection to those living. The badge for the day is the white carnation, emblemic of the purity, love and fidelity of a mother's love. By some the red carnation is worn in honor of living mothers.

It has been disputed as to who originated the idea of Mothers' Day, but credit is given to Miss Anna Jarvis of Philadelphia, when this day was first observed in several cities in 1910, the custom being extended rapidly in the following years.

Few of us reflect as often as we should on the debt of love and gratitude we owe to our mothers. By thoughts and acts of sincere affection on Mothers' Day, we not only honor them, but also honor ourselves.

It was an old son or daughter who permitted last Sunday to pass without some message, some greeting, to the living mother, or without some love-tinctured remembrance or tribute to the mother dead.

THE UBIQUITOUS FLY

Swatting the fly is meritorious practice, but swatting the fly's breeding place is far better. The best way to swat the fly is to eliminate, in and about the household, the places where it breeds, and the best time for this work of elimination is the present. A little spring cleaning is worth more than a lot of summer swatting.

Exposed garbage and filth in general represent the most prolific fly-breeding spots. Millions of these germ-marrying, filthy, annoying insects can be produced from a small accumulation of rotting refuse. Owing to individual carelessness in this direction, countless flies are each year bred to spread their damage.

There is no possibility of going too far in the elimination of potential fly-breeding conditions, for the fly's death-dealing power is not exaggerated. It is probable that 40,000 deaths annually on the North American continent can be traced directly to infections brought by flies. Than the fly, there is no deadlier enemy of infancy and no greater obstacle to the reduction of the infant death rate.

The annual war on the fly must start early if this pest is not to spoil the spring, summer and fall for everybody. Housewives who do not relish fly-specked ceilings and flies in their iced tea will supertintend an early clean-up and early erection of summer screens.

As will be seen by advt. in another column, the Village Council gives warning that final clean-up day in Delia will be May 23rd

THE CANTEEN FUNDS' ACT

This important act is one that should claim the attention and interest of every ex-soldier, but as far as Alberta is concerned very few enquiries indeed have been received by the Board of Trustees asking for information, and it is a fairly safe statement to make that not one per cent of our Comrades have ever seen and read the Act. When the grim tolone of the Reaper visits the family, however, the funds have been ever ready to give a helping hand, and for the past three years many cases of this kind from all parts of Alberta have been helped in a very substantial way.

Few will deny the fact, that to keep going on year after year, doing nothing more than relieving cases of distress (worthy indeed as such work undoubtedly is) cannot be regarded as a "policy," or a main and ultimate purpose to which the Canteen Fund can most usefully be put. It is true that the poor and needy will always be with us; the helping hand in their direction will always be a welcome one, but the thoughtful element amongst ex-soldiers undoubtedly looks for the inauguration of some monumental work to be carried out, to which the Canteen Fund (or a substantial portion of it) can be finally and definitely allocated. The Act itself enjoins upon Trustees the duty of taking measures to ascertain the wishes of ex-soldiers themselves in the matter of the ultimate disposal of the Funds, and whilst the Trustees have exercised careful efforts in this direction, both by addressing veterans' branches, conventions, and by correspondence, no definite schemes or proposals from these organizations, leading to a main policy have as yet been presented.

On March 31st, 1929, the three-year term of the present Board expired. We have been unable to learn whether the same three Trustees have been reappointed, but it has been decided that their final report shall include the very definite recommendation to allocate the sum of $125,000.00 or more for the purpose of creating a home as a sanctuary for our aged Comrades, broken in health and estate, so that there may be made available to them a measure of comfort and help in their declining years. No nobler purpose can be found for the main part of the Fund, and it is to be further recommended that the balance of approximately $45,000.00 be held in reserve to meet the class of cases that have been assisted during the past three years, together with such other equally worthy claims for recognition as may later come forward.

All branches of the various ex-soldier organizations in Alberta, as well as their members individually are urged to give this enquiry question immediate and serious consideration. Their conventions are to be held during the summer months, and these events will give opportunity of expressing concrete opinion by resolution, having the effect of showing the Trustees whether the recommendations above quoted are worthy of endorsement; or such conventions may, perhaps, suggest some other substantial project upon which to expend the Canteen Funds. So far, however, there appears to be but one popular demand that whatever policy is finally adopted it will be such that the funds will be fully used up during the next fifteen or twenty years.

The popularity of the New Ford in the Delia district is evidenced by the registration of seventeen Ford sales in the month of April. Wm. Gibson, local Ford Dealer, has received his seventh car-load of new cars, and has now a complete stock of all models.

* * *

With threatening skies last Sunday afternoon, the much welcomed rain commenced to fall late at night, and continued copiously all day Monday. During the night it blew somewhat of a blizzard, with two or three inches of snow Tuesday morning. There has been frost nights with northerly winds. Weather at present—Clear and cool

* * *

We have received a communication from Ernest Adams, who sold his stock and chattels on his farm two miles south of Mecheche last October, Since then he has been residing at Herouxville, Que. He wishes us to state that he has now changed his address to "St. Georges, Co. Champlain, P.Q." In Ford's it reads—"St. Georges de Champlain, P.Q."

* * *

The Delia Tennis Club held their annual meeting on Monday last at the Town Hall. Although there was not a large turnout, owing to the stormy weather, the feeling shown by those present indicated that every effort would be put forward in making the season a successful one. Work on the courts is to be commenced as soon as weather permits. Meanwhile a membership drive is being started, and in view of the fact that the fees have been decreased, it is hoped that the club's membership will be a large one. The following officers were elected; Hon., D. H. Campbell; Vice-pres., Miss J. MacDonald; Sec-treas., Jas. Mitchell.

Craigmyle News

The local group of Trail Rangers had as their guest at a banquet held in the United Church on Monday evening, Gordon Lapp, Secretary of the Boy's Work Board of Alberta. The boys with the assistance of their mothers and friends put on a very excellent supper on tastefully decorated tables, on which were strung wires emblemic of the name of the group, Live Wires. Eighteen boys and their parents or friends sat down under the chairmanship of Scoutmaster, John Bell. Various toasts were proposed by the boys and responded to by their elders, and an excellent address was given by Mr. Lapp, which was listened most attentively by all. Community singing, some community singing. The evening was brought to a close by the singing of "God Save the King" and many expressions of appreciation were heard, and hope was voiced that the gathering would be repeated possibly as an annual affair.

The splendid moisture, in the shape of rain and snow, which fell at the beginning of the week, has put the land in ideal condition to encourage growth, and every form of plant life is showing green. 1.27 inches of rain or moisture fell from early Monday morning until noon on Tuesday.

Fred F. Patterson and son Jack went to Calgary by car on Sunday afternoon, and the state of the roads did not make for a good return trip on Monday or Tuesday.

Combines!

Don't buy a Combine before seeing the new Minneapolis 10, 12, 16 and 20 foot cut.

Last year the Minneapolis Combines were a success. This year they are better than ever, with Swather and Pick-up made strong and durable.

Alberta Will Co-operate in Radio Control

Co-operation on the part of the Alberta Government was assured the members of the Royal Radio Commission at their session in Edmonton during the past week.

"The government of Alberta," stated Premier Brownlee, "is ready and willing to enter into negotiations with the government of Canada and the governments of the various provinces with a view to the organization of radio broadcasting on a basis of public service by some method that may be mutually agreed upon by the said governments."

Daniel the Prophet

If you are interested in the future, come and study the King of Babylon's dream. History prescribes right down to the end of the age. If you don't know this history, you are in a dangerous position. Come and hear about it on Sunday, at 12 noon in the Baptist Church.

HAND HILLS ECHOES

A proper community spirit was shown in the Hand Hills several days ago, when a number of farmers gathered together at Mrs. F. L. Young' farm and seeded in his grain crop. There were nine drills on the job, and all did splendid work in record time. Everyone went home happy.

We are sorry to report that Mrs. Will Pete has been taken ill with neuritis.

Miss Ida Anderson has also been taken ill, and we hope she will soon be up and around again.

—o—

Judging from the divorce news, about the worst thing one can put on a love letter is stamps.

If at 16 he thinks he looks distinguished, his glands are functioning normally.

The objection to humble people is that they always seem a little too proud of it.
